

Your **Safety**. Our **Priority**.

Product Catalogue

Welcome to Quality Safety International.

QSi is a New Zealand based, Australasian leader and innovator in industrial safety solutions. We manufacture, assemble and test our products on site so you can be assured of the highest quality. We are renowned for delivering innovative and customised solutions. We ask "What do you, the customer, want?"

Our story

We value our relationships throughout New Zealand and the world. By choosing QSi, you will not only have access to a specialist supply network that spans New Zealand, but will be served by a passionate team who all believe in using the power of our 'global' knowledge and local expertise to fuel the success of our customers.

Our Vision

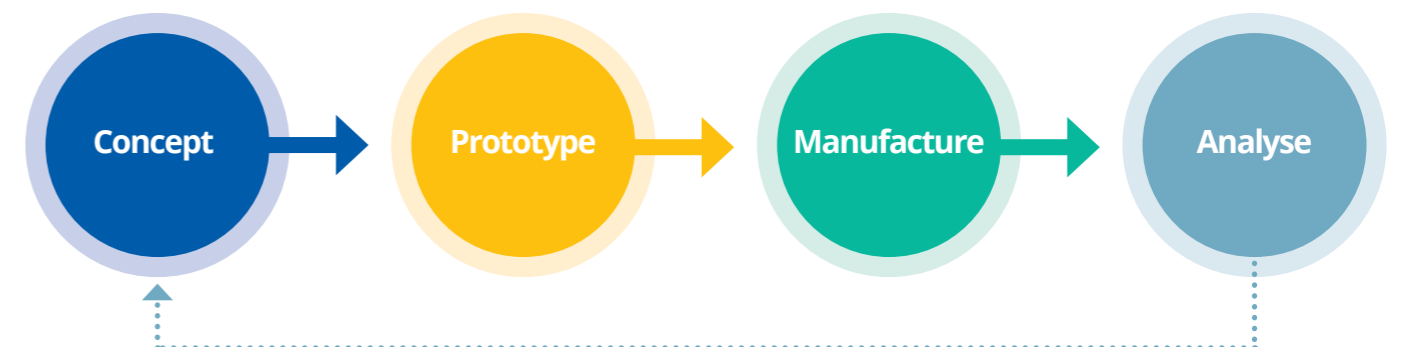

QSi is planning for success in a changing world. This extends from our products, services and systems to ensuring our customers have access to cutting edge standards, compliant safety equipment, garments and hardware.

This is encompassed in our vision to “lead innovation in the design and manufacture of safety equipment solutions, being renowned for quality in everything we do. Safety is our priority”.

Our Process

There are five themes which underpin and demonstrate our approach; these are:

- We are recognised as leaders in delivery of safety products and services
- We constantly look for ways to innovate and improve
- We will work with you collaboratively and will be responsive to your needs
- We have a team of professionals who are passionate about safety
- We actively look for ways we can add value to you achieving your goals.

New Zealand's first IANZ accredited height safety laboratory

QSi are accredited by IANZ to test height safety gear to the AS/NZS 1891.1: 2007, AS/NZS 1891.3 and AS/NZS 5532 standards. This means every product we make has been tested to the most stringent standards.

Having our own testing facility on site gives us the unique opportunity to take our products to the limit multiple times throughout the development process instead of relying on fewer, more expensive tests in a foreign lab.

This allows us to identify and solve problems quickly, greatly reducing development costs, resulting in a better and more affordable product for our customers.

Our Philosophy

QSi is sales driven and does not operate on simply a "Just in Time" service standard. We overstock product for the benefit of our customers. QSi goes to market with the question: "What do you, the customer want?"

Quality Safety is managed on a basis of strong principles and integrity, and we value our staff and customers.

Contents

Please note. Every effort has been made to ensure this catalogue is accurate but QSi make no guarantee that it is free of errors. Product specifications and availability are subject to change without notice.

Terms and conditions

- Kit contents and brands may vary from time to time but quality will never be compromised
- First aid guides are not a substitute for formal first aid training
- Businesses are required to comply with the Health and Safety Act and have a first aid kit that can sufficiently handle the possible first aid risks that may occur at their place of work
- Though we can provide assistance and advice, the customer is responsible for choosing a kit that best suits their first aid risks
- Refill packs are not necessarily a full replacement of original kit contents but are designed to replace commonly used items
- Components in our Help-It first aid kits have a life-span of at least 18 months from date of assembly

Why choose a QSi Help-It first aid kit?

Quality | Help-It hand pick the highest quality components for their kits and travel to visit manufacturers to ensure consistent quality.

Value | Help-It first aid kits are known for being some of the most comprehensive and well stocked kits on the market. Where other manufacturers give you just the bare minimum, Help-It aim to provide the most first aid bang for your buck.

Assurance | The manufacturer is a Medsafe registered company. Where necessary, Help-It first aid kits exceed WorkSafe's minimum requirements.

Diverse | Help-It first aid kits are designed with your varying situations in mind. Whether you are on your own or part of a group, at home, at work or on the road, Help-It have a first aid kit designed just for you.

Accessibility | Speed is of the essence when it comes to first aid. Help-It kits have multiple compartments to keep every item in its place so you can find things quickly and easily.

Convenience | Help-It also provides handy refill packs for most kits in the range, taking the guesswork out of keeping your kit up to date. If you have any ideas for a kit specific to a customer's industry, please contact us to put it together for you.

Lone worker 1

Features

Ideal for people working on their own, this compact one person kit is designed to provide limited but essential first aid coverage. Also available with a compact fire extinguisher and mounting frame.

Product Codes

-------------	--------------------

Major incident kit in backpack

Features

The Major Incident Kit is more than just a first aid kit. Within the large, easy-to-carry backpack you'll find a range of individual mini-kits, each designed to cater for a specific incident. Responding to a fire emergency? Grab the burns kit. Major trauma event? Grab the major injury kit. Supplied mini-kits include:

- eye injury
- burn injury
- minor injury
- major injury

The Major Incident Kit is designed for big events with large numbers of people spread across a wide area, where you can expect a range of different incidents to occur, some more severe than others:

- sporting events
- concerts
- festivals
- fielddays

Comes with contents list card and re-stock form.

Product Codes

FAK014	Major Incident Kit in Backpack

➤ help-it.
protect & heal

first aid & medical products

Why choose a QSi Help-it first aid & medical...

As per our Help-It philosophy; *"Protect and Heal"* – we take our role very seriously in the medical and first aid arena.

Importing and assembling pharmaceutical grade products is the key to our success.

We won't compromise on quality, and sell products that are fit for purpose and have been tried and tested in the market for years.

Don't compromise on your worker's or family's health and safety - ask for Help-It products.

First aid tips sheet

Features

When you're confronted with a medical emergency, you need to be able to respond quickly and accurately. We designed our first aid tips booklet with this in mind.

It has the basic info you need for most situations in a concise and easy-to-read format. It also includes a step-by-step CPR guide, with specific information when treating children and infants.

Our research indicated that information is slower to find in a booklet format. Instead, we designed ours to fold out into a single, A4 sized, double-sided page so you can see at a glance the info you need. It folds up small enough to fit in your wallet or even the smallest of first aid kits.

Product Codes

FATIP	First Aid Tips

paramedic &
rescue equipment

We've got your back.

In an emergency, your focus is on the patient, one hundred percent. There's no time to think about your gear, no time to wonder if it's going to work as it should; when lives are at risk, your gear just has to work - period!

At QSi, we worry about the details for you. We source and manufacture high quality, affordable paramedic and rescue equipment so our customers can rest assured their gear will do its job, no questions asked.

Scoop stretcher

Features

Adjustable, lightweight aluminium stretcher designed for easy transfer of patient in emergency situations. Comes complete with patient restraint straps.

Folded size: 167cm x 42cm x 7cm

Expanded size: 214cm x 42cm x 7cm

Weight: 8kg | Max Load: 159kg

Product Codes

PARA26 Scoop Stretcher

Flat folding stretchers

Features

Compact, alloy-framed stretcher with wheels at one end to aid movement. Wheels and feet can be folded in and locked in place for storage. Comes complete with patient restraint straps.

Folded size: 93cm x 52cm x 23cm

Expanded size: 185cm x 52cm x 23cm

Weight: 5kg | Max Load: 159kg

Product Codes

PARA26A Flat Folding Stretcher - Model A

Double folding stretcher

Features

Lightweight alloy-framed stretcher that folds to half its length and one third its width. Comes with sturdy carry bag.

Folded size: 110cm x 18cm x 11cm

Expanded size: 221cm x 53cm x 15cm

Weight: 5kg | Max Load: 159kg

Product Codes

PARA23 Double Folding Stretcher

Quad folding stretcher

Features

Super-compact stretcher that folds down to only a quarter of its full size. Comes with sturdy carry bag.

Folded size: 56cm x 22cm x 20cm

➤ help-it.
spill solutions

spill solutions

Be prepared with Help-it Spill Solutions

When emergencies happen, you need to be prepared. No matter where you are, you need to know you can respond when faced with a spill.

Help-It Spill Solutions include a choice of natural or synthetic absorbent products. We have a wide variety of booms, socks, pads and pillows in various sizes and lengths to suit most types and sizes of spill. We also supply loose absorbent material.

Help-It Spill Kits contain the products and tools you need to safely contain a spill, including basic safety equipment for the user and enough absorbent product to deal with a specific size of spill, ranging from 25 to 240 Litres.

Help-It ANA-Fibre - the ultimate environmentally friendly spill solution.

Oil and chemical spills are some of the worst disasters man can inflict on the planet. Thankfully, mother nature has provided us with a perfect antidote: Help It Activated Natural Absorbent Fibre, or ANA-Fibre.

Key Features:

Highly absorbent - absorbs up to 4 times its dry weight in volume. One kilogram of fibre will absorb 3-5 litres of hydrocarbons.

Highly versatile - absorbs a vast range of pollutants including oils, pesticides, solvents, alcohol, effluents, heavy metals, inks, dyes, algae and a wide range of other chemicals and industrial wastes.

Fast acting - absorption for most hydrocarbons is almost instantaneous on contact. Some chemical spills may take a little longer.

Water resistant - can be used on water and in wet areas.

Suppresses vapours - helps prevent fire and explosions, and reduces risk to personnel from inhalation of toxic fumes.

Will not leak - the fibre will not leach or discharge the absorbed pollutant making it clean and easy to handle.

Environmentally Friendly - as well as being made from a natural, renewable source, ANA-Fibre can be incinerated or disposed of in landfills without damaging the environment. It can even be made into compost! Over time, ANA-Fibre slowly breaks down the absorbed contaminants and gradually releases them harmlessly

into the environment. When incinerated, the resulting residue is only 4% of its original volume.

Light Weight - allows the user to carry more product, clean up more spill, and save on transportation and disposal costs.

Why it works:

Help-It ANA-Fibre is harvested in New Zealand and is naturally occurring. After treatment the natural moisture content is reduced to around 10-15% and the cellular structure of the fibre is altered to become completely hydrophobic (water resistant) while becoming highly absorbent of hydrocarbons and chemicals.

The refined fibre is then packaged loose in carry-bags, distributed in bulk, or used in our unique socks, pillows and booms for instant spill containment.

ANA-Fibre filled socks

Features

These socks are designed to encircle spills, both absorbing the contaminant and ensuring the spill does not spread. They can also be floated on water.

Product Codes

ABSFIBSK1.2	1.2m x 6cm Sock
ABSFIBSK2.4	2.4m x 6cm Sock
ABSFIBSK3.0	3m x 6cm Sock
ABSFIBSK3.6	3.6m x 6cm Sock

ANA-fibre filled pillows

Features

Our pillows are perfect for taking care of drips (and lining drip trays) or soaking up pooled spills.

Product Codes

ABSFIBPW35X20	Small Pillow (35x20cm)
ABSFIBPW60X40	Large Pillow (60x40cm)

ANA-fibre filled booms

Features

Big brother to the socks, ANA-Fibre filled booms can be used to dam large spills on water ways while absorbing vast amounts of contaminant.

Product Codes

ABSFIBBM3X13	Thin Boom (3m x 13cm)
ABSFIBBM3X18	Thick Boom (3m x 18cm)

ANA-fibre

Features

Loose ANA-Fibre packaged in sturdy plastic bags. Designed to be poured onto a spill to soak up oil or chemicals.

When placed on hydrocarbon-contaminated water, it will float and naturally clump together as it absorbs the spill, making it easy to scoop from the water.

Will absorb up to five times its dry body-weight in litres of contaminant.

Product Codes

ABSFIB3	ANA-Fibre - 15Lt approx absorption capacity (Bag volume approx 10Lt)*
ABSFIB5	ANA-Fibre - 25Lt approx absorption capacity (Bag volume approx 16.5Lt)*
ABSFIB15	ANA-Fibre - 75Lt approx absorption capacity (Bag volume approx 50Lt)*
ABSFIB25	ANA-Fibre - 125Lt approx absorption capacity (Bag volume approx 100Lt)*

Granular absorbent

Features

Granular absorbent packaged in sturdy plastic bags. Designed to be poured onto a spill to soak up oil or chemicals. Will absorb up to 70% of its dry body-weight.

Product Codes

ABSGRAN5KG	7.9L Standard Loose Granular Absorbent (approx 5kg)
ABSGRAN15KG	22L Standard Loose Granular Absorbent (approx 15kg)

Large plastic shovel

Features

Large plastic shovel designed for cleanup of spill absorption products such as ANA-Fibre and Granular Absorbent.

Product Codes

PLASSHOVEL	Large Plastic Shovel
------------	----------------------

Synthetic pads - oil**Features**

These absorbent pads are used to soak up surface spills, contain drips, etc. They are available in packs of five, or in bulk and come in two weights.

Product Codes

ABSPADOIL200G5PK	Light Synthetic Absorbent Pad 200gsm (5-Pack)
ABSPADOIL200GBOX	Light Synthetic Absorbent Pad 200gsm (Box 200)

Spill drain guard

Features

Designed to be placed over drain inlets to catch any residual debris not caught by pads and drain mats.

Product Codes

DRAINGUARDS	Drain Guard 1.2 x 1.2m
-------------	------------------------

Help-it spill kits

These kits are packed with everything you need for the efficient containment of spills. We have a range of sizes to suit varying levels of risk and types of contaminant. Most kits contain the following tools to aid the user: clean-up bags, basic personal protection equipment, gloves, basic instructions.

Unlike some of our competitors, we have measured the absorption of the products in each kit to ensure they will absorb up to the number of litres indicated on the kit. This figure does not represent the physical volume of the kit container.

Every spill kit purchased comes with our comprehensive Spill Kit Guide booklet that contains information on the best products and methods to prepare for, clean up, and dispose of your spills.

NOTE - Contents of our spill kits may vary in contents and branding from time to time, however we will never compromise on quality and absorption rates.

15L oil (hydrocarbon) spill kit

Features

This kit is designed to absorb up to 15 litres of contaminant. The kit is compact enough to fit behind the seat of a truck or ute and makes a great first line of defence.

Product Codes

ASKVEH	15L oil vehicle spill kit
ASKVEHRF	Refill pack

25L oil (hydrocarbon) spill kit

Features

This kit is designed to absorb spills up to 25 litres. It is compact enough to fit behind the seat of a truck or ute. The 'WPB' version comes in a yellow waterproof dry-bag.

Product Codes

ASK25OIL	25L oil (hydrocarbon) spill kit
ASK25OILWPB	25L oil spill kit in waterproof bag
ASK25OILRF	Refill pack

50L oil (hydrocarbon) spill kit

Features

This kit is designed to absorb up to 50 litre spills.

Product Codes

ASK50OIL	50L oil (hydrocarbon) spill kit
ASK50OILRF	Refill pack

80L oil (hydrocarbon) spill kit

Features

This kit is designed to absorb large spills up to 80 litres.

Product Codes

ASK80OIL	80L oil (hydrocarbon) spill kit
ASK80OILRF	Refill pack

120L oil (hydrocarbon) spill kit

Features

This kit is designed to absorb large spills up to 120 litres. Wheelie bin provides storage of the kit before use, aids transport of kit to spill site and makes disposal of used items easy.

Product Codes

ASK1200IL	15L oil vehicle spill kit
ASK1200ILRF	Refill pack

240L oil (hydrocarbon) spill kit - economy

Features

This kit is designed to absorb extra large spills up to 240 litres. Wheelie bin provides storage of the kit before use, aids transport of kit to spill site and makes disposal of used items easy.

Product Codes

ASK240E0IL	240L oil spill kit - economy
ASK250ILWPB	Refill pack

240L oil (hydrocarbon) spill kit - premium

Features

This premium kit is designed to absorb a wide range of different sized spills up to 240 litres. Added extra socks and pillows, plus smaller bags of loose fibre so a number of smaller spills can be contained without having to open and use everything in the kit at once.

Product Codes

ASK240P0IL	240L oil spill kit - premium
ASK240P0ILRF	Refill pack

30L chemical spill kit

Features

This kit is designed to absorb up to 30 litres of chemicals.

Product Codes

ASK30CHEM	30L chemical spill kit
ASK30CHEMRF	Refill pack

50L chemical spill kit

Features

This kit is designed to absorb up to 50 litres of chemicals.

Product Codes

ASK50CHEM	50L chemical spill kit
ASK50CHEMRF	Refill pack

120L chemical spill kit

Features

This kit is designed to absorb up to 120 litres of chemical spills. Wheelie bin provides storage of the kit before use, aids transport of kit to spill site and makes disposal of used items easy.

Product Codes

ASK120CHEM	120L chemical spill kit
ASK120CHEMRF	Refill pack

240L chemical spill kit

Features

This kit is designed to absorb up to 240 litres of chemicals. Wheelie bin provides storage of the kit before use, aids transport of kit to spill site and makes disposal of used items easy.

Product Codes

ASK240CHEM	240L chemical spill kit
ASK240CHEMRF	Refill pack

30L general purpose spill kit

Features

This kit is designed to absorb up to 30 litres of general liquid spills.

Product Codes

ASK30GPS	30L general purpose spill kit
ASK30GPSRF	Refill pack

50L general purpose spill kit

Features

This kit is designed to absorb up to 50 litres of general liquid spills.

premium height
safety equipment

Quality born from experience

QSi has been designing and manufacturing premium quality height safety equipment for over 40 years, drawing on over 70 years of safety experience. Our many years of experience in manufacturing has given us a reputation for innovative product development.

We manufacture many of our height safety products right here in New Zealand, in our ISO9001 approved factory, so we have direct control over the quality and can easily scale our output to meet demand with the minimum of lead time.

Many other customer benefits are achieved by manufacturing and testing in New Zealand, including work-specific products, current dates, and ongoing surveillance of products.

We also source directly from the world's best manufacturers, made to our own exacting standards.

All QSi products are certified to either the AS/NZS 1891 or equivalent industry acceptable standards where applicable.

Manufactured & tested in New Zealand

QSi are accredited by IANZ to test height safety gear to the AS/NZS 1891.1:2007, AS/NZS 1891.3 and AS/NZS 5532 standards. This means every product we make has been tested to the most stringent standards.

We also have Telarc ISO 9001 certification, BSI product benchmark certification (on various products), as well as CASA approval as a manufacturing facility for aviation harnesses

It also means we're more than just a "visual inspector" - we don't just look at gear, we put it through its paces to ensure it's fit for purpose and won't let you down.

Having our own testing facility on site gives us the unique opportunity to take our products to the limit multiple times throughout the development process instead of relying on fewer, more expensive tests in a foreign lab.

This allows us to identify and solve problems quickly, greatly reducing development costs, resulting in a better and more affordable product for our customers.

Flexibility & affordability

Customising is our speciality. We love to work alongside our customers to develop tailor-made products that meet their unique requirements. We're not here to tell you what you need, we're here to listen, collaborate, and find solutions.

This begins with custom printed bags, lanyard and harness labels with your company logo, and extends through to custom designed harnesses specific to the needs of you and your industry.

Understanding New Zealand's height safety standards

Height safety is largely a matter of trust. As users, we trust that our equipment has been subjected to rigorous testing and meets the required safety standards. Understanding height safety equipment standards can be difficult for distributors, resellers and consumers alike.

There has been much confusion and misunderstanding of the AS/NZS 1891 group of standards relating to height safety products in New Zealand. It has become apparent that some manufacturers have been marking product to non-existing testing standards, and possibly misleading consumers as a result. Added to this, WAHA Australia have recently uncovered issues with roof anchors and fixed life line systems not meeting the new AS/NZS 5532:2013 standard.

QSI has been working hard to become one of the first IANZ accredited facilities in New Zealand to test to the AS/NZS 1891.1:2007 and AS/NZS 1891.3 standards. This has taken over 3 years to achieve, but has given us much insight into the testing and marking of products to this set of standards.

EN versus AS/NZS Standards

Some importers of product mark their harnesses, shock absorbing lanyards and pole straps to both the EN and AS/NZS 1891.1:2007 standards on the same product. We are often asked, "what is the difference between the AS/NZS 1891.1:2007 standard and the equivalent EN standards?"

The table on the following page details some distinct differences.

It will not be possible for an EN labelled product's test certificate to pass the AS/NZS 1891.1:2007 standard as they could not possibly meet the labelling and marking

requirements, just as it would not be possible for the AS/NZS 1891.1:2007 product to meet the EN standard because the marking, labelling and instructions are different.

There is nothing wrong with EN certified product and we at QSI sell and use EN product ourselves. The only difference is that we market it as having the 5 year life span it conforms to, unless we have a UV certificate showing the webbing complies to the AS/NZS UV testing requirements.

AS/NZS 1891.4 is not a Testing Standard

Another big area of concern is the tendency of some companies to mark products to the AS/NZS 1891.4 standard. Although this falls under the family of testing standards, it in itself is not actually a testing standard, but rather a user selection and maintenance guide.

The most common products marked with this standard are anchor points and slings, but we have also seen some harnesses and pole straps marked this way.

The 1891.4-2009 standard clearly states it is for selection, use, and maintenance. If you asked QSI Testing Laboratory to test to this standard we would tell you it is impossible as there are no testing specifications and methods of testing laid out in this document. Furthermore, Section 1.5 of the standard states that compliance to the standard cannot be claimed on any product.

The criteria of section 1.5 of AS/NZS 1891.4 2009 is as follows:

1.5 PERFORMANCE REQUIREMENTS

This Standard does not include product performance requirements for height safety equipment. Compliance to this Standard of any such equipment cannot be claimed.

Performance requirements with which items of equipment dealt within this Standard shall comply are specified in AS/NZS 1891, Parts 1, 2 and 3.

If you have product marked or bearing the mark of the AS/NZS 1891.4 standard, or claiming to be tested to and complying to the AS/NZS 1891.4 standard, the product should be examined carefully as it is not possible to test to this standard. Any document claiming to be a test certificate to this standard is likely to be incorrect.

The new AS/NZS 5532:2013 standard is a part of the AS/NZS 1891 group and deals with tripods, davit arms, and both temporary and fixed anchor points. The standard was published in late 2013.

It is important that distributors, resellers, end-users and their employers are educated on what the standards cover. The difficulty of obtaining information about the standards has resulted in some users being misled into thinking certain products meet a nonexistent standard. If anyone feels a product is not up to standard they have the right to ask for the testing certificates, and each model of height safety equipment is required to have its own testing certificate.

As users, resellers and distributors become more savvy and better educated on the details of the AS/NZS and EN standards, we hope to see a greater level of compliance for all height safety equipment sold in New Zealand. In the meantime, we advise consumers to be vigilant and not take any manufacturer's claims at face value. Ask questions, ask for certificates, double-check, and get educated; after all, your life and your business could depend on it.

Key differences between EN and AS/NZS high safety standards

Test criteria	AS/NZS 1891.1:2007 Standard	EN Standard
UV Testing and Lifespan	We are required to conduct a determination of resistance of webbing to light test as per Appendix A of AS/NZS 1891.1:2007. This gives us our 10-year life span on webbing products certified to the AS/NZS 1891.1:2007 standard. Actual certificate is needed on the webbing, not the thread.	EN standards do not require UV testing as the product is only required to last 5 years.
Dynamic Drop Testing	The AS/NZS 1891.1:2007 dynamic drop test is conducted on a 2m x 12mm diameter, three-strand, polyester hawser-laid rope. Each harness will have a 'head-up' and 'head-down' drop on the fall arrest attachment points. On a head-up drop it will generate over 12kN of force during the drop and the head-down could be as much as 16kN to 18kN. The AS/NZS standard does not specify a force requirement that the harness needs to be exposed to, but the force generally exceeds the 12kN load due to the lack of stretch in the polyester rope. Thus, most of the energy ends up in the harness.	The EN 364 standard requires a single mountaineering rope of 11mm diameter. This is known as kernmantle rope and has more stretch in it than the 12mm polyester rope. The EN test also requires a head-up and head-down drop on the fall arrest attachment points. If the testing facility uses dynamic mountaineering rope, this has a lot of stretch to allow for some shock absorption during a climber's fall, this is why the EN standard specifies a minimum force requirement of 7.5kN that needs to be achieved on the first drop.
Marking and Labelling	The marking and labelling requirements as per AS/NZS 1891.1:2007 section 6.1 (Instructions for use) and section 6.2 (marking) are very specific on font size, label layout, and details that need to be included in the warning labels as well as the instruction book. The AS/NZS 1891.1:2007 product needs a clear date of withdrawal.	The EN requirements are vastly different in terms of labelling and instructions for use, even to the point of using an "A" symbol to indicate the fall arrest attachment point. The EN product only requires a date of manufacture. The 5 year life is standard unless specified differently by the manufacturer on the basis of a UV certificate.

Height safety training & gear inspection

Our drop test tower and classroom space are regularly used by external training organisations as a venue for height safety training courses.

If you or your team members need to attend an accredited training course but are not sure where to start, feel free to contact us and we'll put you in touch with an appropriate provider.

All height safety gear must be inspected by a competent person on a regular basis as required by the AS/NZS 1891.4 standard:

- **Harnesses, lanyards, pole straps, etc:** six monthly. (All products covered by the AS/NZS 1891.1 standard)
- **Retractable lanyards:** Annually. (All products covered by the AS/NZS 1891.3 standard)

If a suitable person cannot be found in your organisation, or if you prefer to leave this up to the experts, we recommend you take advantage of QSI's visual inspection service.*

Email info@qsisafety.com for more information.

* Please note: The six monthly or annual inspection is not a substitute for daily checks.

Selecting the correct fall protection equipment

The A, B, C, D of fall protection covers all the fundamental points of personal fall protection, but before you can use or select the correct equipment you need to be adequately trained. There are dedicated NZQA and AQTF training courses focusing on height safety as well as best practice guidelines for working at height and on roofs in New Zealand and Australia.

A – Anchor

The anchor point is one of the critical elements of the fall arrest system. The AS/NZS 1891.4 guidelines state a single anchor point needs to be 15kN, and 21kN if two users are attached to the same point.

B – Body support

Full body harnesses are what connects the user to the fall arrest system and they come in a variety of styles. The AS/NZS 1891.1:2007 standards differ from other international standards as they have been written to ensure the product conforms to the higher UV levels experienced in Australasia as well as having a minimum of two fall arrest attachment points (sternal and dorsal).

C - Connectors

Connectors are used to make the link between the body support and the anchor device, they come in various styles and configurations.

D – Descent and Rescue

In the event of a fall there must be a system or plan in place to allow the user to descend safely to the ground or be rescued without endangering the user or other colleagues.

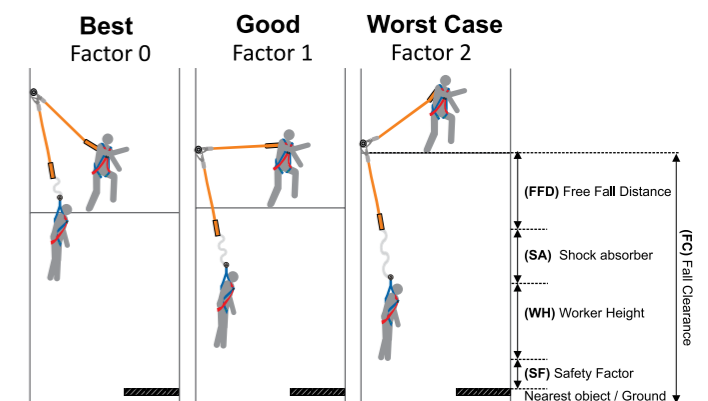

Calculating fall clearance

Fall Clearance is the distance needed to safely arrest a fall so that the user does not strike an object below or the ground.

General Calculation:

(FC)	Fall Clearance	$FC = FFD + SA + WH + SF$
(FFD)	Free Fall Distance	Maximum length: 2m
(SA)	Maximum Length of Extended Shock Absorber	1.75m for standard unit 1.95m for 150kg unit
(WH)	Height of Worker	Average: 1.7m
(SF)	Safety Factor	Minimum: 1m

As per AS/NZS 1891.4 the Fall Clearance (FC) can be reduced by limiting the free fall distance (FFD) and reducing the amount of shock absorber tear out (SA).	FFD – Free Fall Distance	SA – Shock Absorber Ext.
	600mm	300mm
	1000mm	500mm
	1500mm	600mm
	2000mm	900mm

Fall Factor 0 Indicates that you have reduced as much free fall distance as possible by attaching your lanyard above you.

Fall Factor 1 Indicates your anchor point is at the same level as your attachment point on the harness. This means that you will potentially fall the full length of your lanyard (2m on a 2m lanyard).

Fall Factor 2 Is the worst case scenario, where you are anchored at your feet. This means you will fall up to twice the length of your lanyard. A total of 6.75m clearance would be required when using a 2m lanyard.

What's in the box?

Congratulations, you've made a great decision to invest in your safety with QSi height safety gear.

Before you make your purchase, check the sticker on the front of the box to make sure you've picked the product that's right for you.

Inside the box you'll find more than just great height safety gear. There are two important items that you must not throw away: The Product Instructions Booklet and Certificate of Conformity.

Product instructions booklet

This booklet contains donning and safe use instructions for QSi harnesses, lanyards and metal hardware. Find your product and read the instructions carefully - your life may depend on it.

Store the booklet with the equipment so anyone else who needs to use it can learn how to do so safely.

Certificate of conformity

This certificate is your guarantee that the product has been manufactured and tested to the appropriate AS/NZS or other applicable international standard.

All the key information for your particular product is recorded on the certificate including how often it should be inspected and when it should be withdrawn from service and disposed of.

Inspection record

On the reverse side of the certificate you'll find an Inspection Record table, essential for the safe, long-term use of your equipment. AS/NZS 1891.4 requires that your gear is inspected regularly:

- Six-Monthly: Harnesses, lanyards, pole straps, etc (all products covered by the AS/NZS 1891.1 standard)
- Annually: Retractable lanyards (all products covered by the AS/NZS 1891.3 standard)

These inspections must be recorded in the Inspection Record on the back of the Certificate of Conformity as proof you comply with the standards and are adhering to workplace safety legislation.

Full body harness - SBE2 series

Features

Our standard Full Body Harnesses feature two attachment webbing loops and a dorsal attachment D-Ring for fall-arrest. The sternal attachment points are particularly suitable for use with rope or cable grabs and offer a comfortable position to work from as well as for rescue.

High strength, easy adjustment webbing buckles are used on both legs and chest. Other features include easy-grip shoulder adjustment buckles, webbing fall arrest loops and high strength stitch pattern.

The SBE2 is available in sizes 3XL and above for use in conjunction with a 150kg rated fall arrest block. See pg. 130 for more information.

Optional Extras:

- D-Ring Extension Strap
- X-Factor Shoulder Padding System
- AirTech Breathable Padding System (see pg. 129)
- Heavy Duty PVC Bags, Backpacks, etc (see pg. 156)
- Tool Lanyards and Pouches (see pg. 208)

Full body harness with confined space loops - SBE3 series

Features

This harness takes all the great features of the SBE2 Full Body Harness and adds confined space loops to the shoulder straps to make it suited for workers in confined spaces. The loops can be used with a spreader bar during emergency retrieval situations to comfortably raise or lower the user.

The SBE3 is available in sizes 3XL and above for use in conjunction with a 150kg rated fall arrest block. See pg. 130 for more information.

Optional Extras:

- D-Ring Extension Strap
- X-Factor Shoulder Padding System
- AirTech Breathable Padding System (see pg. 129)
- Heavy Duty PVC Bags, Backpacks, etc (see pg. 156)

Full body harness with waist belt and work positioning D-rings - SBE4 series

SBE4

Features

This harness is the perfect choice for workers needing more stability, support and a hands-free solution.

QSi have added a sturdy waist belt and lateral D-Rings to allow the user full control over their positioning using a pole strap.

The SBE4 is available in sizes 3XL and above for use in conjunction with a 150kg rated fall arrest block. See pg. 130 for more information.

Optional Extras:

- D-Ring Extension Strap
- X-Factor Shoulder Padding System
- AirTech Breathable Padding System (see pg. 129)
- Heavy Duty PVC Bags, Backpacks, etc (see pg. 156)
- Tool Lanyards and Pouches (see pg. 208)

Full body harness with waist belt, D-Rings and confined space loops - SBE5 series

Features

The SBE5 combines all the great features of the SBE3 and SBE4, and adds a full padded waist belt for increased user comfort and support. Large D-Rings provide lateral stability and a hands-free solution using Work Positioning Lanyards, while confined space loops on the fully adjustable shoulder straps allow easy extraction from tight spaces.

The SBE5 and SBE5Rig are available in sizes 3XL and above for use in conjunction with a 150kg rated fall arrest block. See pg. 130 for more information.

Optional Extras:

- D-Ring Extension Strap
- X-Factor Shoulder Padding System
- AirTech Breathable Padding System (see pg. 129)

Full body self-conforming adjustable harness with dorsal and sternal D-Rings - SBE8

Features

Our SBE8 Full Body Harness sets the bar for comfort and flexibility with a new innovation from QSI: the Ring Junction. Shoulder, chest and side straps meet at rings just below the chest where they can each slide and rotate to conform to the user's body shape. The end result is a simple harness that fits more people more comfortably than ever before.

The harness includes dorsal and sternal attachment D-Rings for fall-arrest. High strength, easy adjustment webbing buckles are used on both legs and chest. Other features include easy-grip shoulder adjustment buckles and high strength stitch pattern.

The SBE8 is available in sizes 3XL and above for use in conjunction with a 150kg rated fall arrest block. See pg. 130 for more information.

Optional Extras:

- D-Ring Extension Strap
- X-Factor Shoulder Padding System
- AirTech Breathable Padding System (see pg. 129)
- Heavy Duty PVC Bags, Backpacks, etc (see pg. 156)

Full body cross link harness - SBE9 series

SBE9PRO is pictured.

**SBE9
SBE9PRO**

Features

The SBE9 is a new crosslink design featuring floating shoulder and leg straps. The harness includes two attachment points located on the centre front and centre back.

For general use, construction, mobile platforms and roofing.

Suitable for fall arrest from both front and rear 'D' rings.

The standard harness is a one-size-fits-all covering M - 2XL.

Larger 3XL+ are available for use in conjunction with a 150kg rated fall arrest block. See pg. 130 for more information.

Full body with padded waist belt, D-Rings and confined space loops - SBE7

SBE7

SMALL & 3XL+
sizes available on request

Features

The SBE7 has been developed in conjunction with the construction industry. The shoulder padding, single centre chest D-Ring and quick release buckle make for increased user comfort and support.

Large D-Rings provide lateral stability and a hands-free solution when used with Pole Straps. Confined space loops on the fully adjustable shoulder straps allow easy extraction from tight spaces.

The padded waist belt includes handy tool loops.

The SBE7 is available in sizes 3XL and above for use in conjunction with a 150kg rated fall arrest block. See pg. 130 for more information.

NOTE: SBE7 comes standard with X-Factor shoulder padding.

Confined space

Tower

Rigging suspension

Work positioning

SMALL & 3XL+
sizes available
on request

Features

The SBEMT Multitask Harness is an innovative design allowing the user full adjustment on the chest, legs and position of the Dorsal D-Ring. The result is a harness that fits more users more comfortably.

A standard harness will fit from a medium to a 2XL sized worker. We believe the webbing-to-buckle adjustment relationship is critical to happy users, as well as the ease of putting on the harness. With this in mind we designed our Multitask Harness to be what the workforce is looking for.

In the event of a fall the durable Polyester webbing in our design evenly distributes the impact over the thighs, torso and buttocks. Polyester is known for being wear resistant and non-stretch when compared to other materials, so the harness does not stretch dangerously out of shape when subjected to a fall, reducing the risk of slipping out of the harness.

Our arrest products are designed to meet the high demands of the industry, and the high-quality fittings and easy adjustability of the SBEMT model ensures high user acceptance.

Our harnesses have been specifically designed to meet the AS/NZS 1891.1:2007 standard.

- Superior webbing to buckle relationship, effortlessly slides through the buckle for easy adjustment.
- Shoulder adjustment allows harness to fit people of different heights.
- Standard harness fitting is from M to XXL, accommodating a larger workforce.
- Easy no-tangle donning.
- The sternal point is particularly suitable for use with rope or cable grabs. It offers a comfortable position to work from.
- Ideally positioned sit-strap for extended comfort.
- Lateral D-Rings: For attachment with pole straps, to enable the worker to work comfortably, with both hands free.
- Padded Belt: Increases support and worker productivity.

Certified to: AS/NZS 1891.1:2007

SBEMT Full Body Multitask Harness

Premium full body harness range

High quality, easily adjustable aluminium chest buckle

Lightweight, high strength aluminium D-Rings

Colour-coded shoulder and back padding

Quick release aluminium leg & waist buckle

A range of colour options available on request. Lead times for manufacture may vary.

Supplied in our high quality colour scopic backpack

Premium full body harness - SBE2²

SBE2²

General Use

Construction

Mobile Platform

Roofing

SMALL & 3XL+ sizes available on request

Features

Our Premium Full Body Harness features two attachment webbing loops and a dorsal attachment D-Ring for fall-arrest. The sternal attachment points are particularly suitable for use with rope or cable grabs and offer a comfortable position to work from as well as for rescue.

High strength, easy adjustment webbing buckles are used on both legs and chest. Other features include easy-grip shoulder adjustment buckles, webbing fall arrest loops and high strength stitch pattern.

- Roofing
- Mobile Platform
- Tower
- Rigging Suspension

SMALL & 3XL+
sizes available on request

Features

The QSI Evo Harness is an innovative design allowing the user full adjustment of the chest, legs and position of the Dorsal D-Ring. As a result, the QSI Evo Harness range fits more users, more comfortably.

The standard harness will fit from a medium to a 2XL worker. QSI believe that webbing to adjustment relationship is critical to happy users, as well as the ease of putting on the harness. With this in mind we designed the Evo to be what the workforce is looking for.

In the event of a fall, the durable polyester webbing distributes the impact evenly over the thighs, torso and buttock region. Polyester is known for being wear resistant and non-stretch when compared to other materials, so the harness does not stretch dangerously out of shape when subjected to a fall, therefore the wearer does not risk slipping out of the harness.

Evo arborists sit harness - SBEEVOARB

Designed by arborists for arborists.

SBEEVOARB

SMALL & 3XL+
sizes available on request

Features

The SBEEVOARB was designed by local arborists who needed a working harness that combined safety and flexibility like never before.

The extra-wide, semi-rigid waistbelt offers exceptional support. The harness is easy to don with FAST buckles on the waistbelt and leg loops.

An attachment bridge provides lateral mobility. This is attached to the waistbelt and to the leg loops by a locking buckle to increase hang time, in order to distribute the pressure evenly between the waistbelt and leg loops.

The two lateral attachment points transfer the weight evenly around the waistbelt for comfort while leaning back in the belt (when feet are supported). Eight adjustment points means the user can customize the fit more easily for a greater level of comfort and a longer use time.

Other features include:

- Three equipment loops with protective sheaths
- One ring for attaching a hand saw

Note: pictured rope, carabiner and rope grab not included

--------	-------------------------------------

Flame retardant harness vest

Features

One of the biggest challenges facing construction companies is keeping welding and grinding sparks off the harness webbing. High tech Kevlar/Nomex harnesses are available but the cost is exorbitant.

QSI brings you the solution: The FR Harness Vest.

The FR Harness Vest is comprised of a 100% FR treated cotton vest with an integrated SBE2KQR full body harness. The vest provides thermal and burn protection to the harness webbing and the wearer, and features several flaps that allow easy access to the dorsal D-Ring and chest loops.

The FR Harness Vest is also available to order with many other harnesses in our range. Please contact us for more information.

The vest detaches from the harness, allowing either item to be replaced as required, and makes the harness available for inspection. This combination makes donning the harness easy.

Other features include:

- Self extinguishing fabric, will not catch alight.
- Protection against arcing.
- Adjustable sides for a secure fit.
- Lightweight and easy to wear.
- Handy chest pockets.

Note: Although the FR Harness Vest will not catch alight, large pieces of welding splatter or similar may penetrate the garment if left in contact.

Y-Tech™ Pro Tower Harness - YTECH-PRO

Features

The Y-Tech™ Pro Tower Harness has been developed following extensive consultation with our power utility end-users, giving them the features they desire most.

This premium harness has been designed to eliminate restriction on the shoulders, allowing total upper body movement.

Features include:

- Alloy components.
- Webbing dorsal ring.
- Pole strap attachment points.
- Glove and barriered from waist up.
- Free fall arrest attachment points. Chest straps raise or lower seat for comfort.
- Easy donning & doffing due to the quick release buckles and specialised design.
- Y-shaped back reduces the pressure on the upper torso allowing more freedom to reach out.
- Bright colours with reflective stitching built into the webbing allows for higher visibility under work lights.
- Reduced obstructions on the top of the harness help prevent entanglement while working through power lines.
- Flexible, water-resistant padding on waist and seat allows continued comfort for long periods of time, even while sitting in a vehicle.
- Rear buckle to allow for adjustment of the back webbing ring (this allows for users of different heights to be comfortable).
- Adjustable seat that can be adjusted to allow for comfortable seating during pole strap work. This unique feature allows the user to customise the seat to their work style.

Certified to: AS/NZS 1891.1:2007

Live Wire Pro Cross Over Tower Harness - SBELW-PRO

Features

The Live Wire Pro gives you a new level of comfort, flexibility and safety.

Combining elements of our SBE9 Crosslink Harness, SBETH Tower Harness and Arborists Harness, the Live Wire Pro is a premium harness you can comfortably work in for hours.

Features include:

- Webbing dorsal ring.
- Front and rear fall arrest D-rings.
- Fully padded lower back and seat for extra comfort.
- Fully insulated dielectric upper body hardware.
- Alloy components - lighter and less prone to corrosion.
- Crosslink design to take stress off the shoulders and provide a greater range of movement.
- Pole strap attachment points that guide the forces through the buttocks instead of the back.
- The unique design helps eliminate suspension trauma when the user is suspended from the front D-ring or side pole strap rings.
- The leg fastening straps do not pass through the groin area which helps relieve pressure and circulation problems in fall situations.
- The adjustable seat and wide back padding provides comfortable support when working under work-position tension for long periods of time.

Full body tower harness - SBETH²

SBETH²

- General Use
- Construction
- Mobile Platform
- Electrical
- Work Positioning
- Tower

Features

The Tower Harness takes height safety to a whole new level. Specially designed for high voltage electrical situations, the harness is gloved from the waist up to make it suitable for linesman work.

It features insulated chest buckles and polyester webbing Dorsal D-Ring to reduce the risk of electric shock, as well as a padded waist belt and lateral D-Rings for hands free stability.

The built-in Support Seat gives added comfort and enables the user to work from the harness for extended periods of time.

Our colour options upgrade makes an already excellent harness even better.

Suspension trauma strap

Features

The Suspension Trauma Strap is designed to prevent suspension trauma while a worker is awaiting rescue.

What is Suspension Trauma?

This condition can occur when a person remains suspended at height (after a fall) for even short periods of time.

Suspension in a harness may cause blood to pool in the veins of the legs which can result in unconsciousness; if not rescued promptly, serious injury or death may occur.

Product Codes

Add your branding to QSi height safety gear

Block Label

Your logo printed and sealed under the heat shrink plastic of your shock absorbing block.

We understand the importance of brand recognition but unfortunately most height safety gear tends to cover up any branding you might have on your clothing. We've found the solution.

As a local manufacturer we have the unique ability to offer you custom branded harnesses and lanyards. These additions have been tested rigorously to ensure the equipment continues to comply with the appropriate safety standards, giving you brand recognition without compromising the safety of your team.

Both monochrome and full colour options are available.

Custom Branding Codes

-------	---

Triple action talon hooks

Our triple-action Talon Hook™ is the latest evolution in snap hooks. This product requires three separate actions to open the gate, greatly reducing the potential for accidental release. Much like the eagle depends on its talons for survival, you can depend on the Talon Hook™ for a new level of safety while working at height.

The talon shape and wide gate opening of this hook means it clips on to a wider variety of attachment points, while still being compact and lightweight.

Why Talon Hooks™?

- Robust Steel Construction
- Secure Triple Action Mechanism
- Versatile Hook Design

Pole straps

We develop and produce our own webbing pole straps using the highest quality polyester webbing and synthetic stitching. Our unique stitching pattern prevents the hook folding back on itself, maintaining the strength of the webbing without the need for a plastic keeper. Available in custom lengths over 2.5m.

Pole strap with talon hooks™

Features

Designed to be attached to user's belt at the waist and slung around a pole for work positioning. Talon Hooks™ at both ends with an adjustable stainless steel buckle.

Triple locking carabiner lanyards

Triple Locking Carabiners combine a higher level of safety with a fast, easy to use action.

Unlike screw-gate carabiners that must be manually locked and unlocked, the triple locking carabiner automatically locks in place as the gate closes, so you never have to worry about whether you or your colleague remembered to do it.

It also requires three distinct movements to open, helping prevent accidental release while still being easy to operate with a single hand.

Webbing - Fixed-length

Note: to comply with AS/NZS 1891.1:2007, lanyards can be no more than 2m in length. If you intend to use your lanyard with a D-Ring Extension Strap, be sure to choose the 1.5m lanyard.

Single leg lanyard

Webbing shock absorbing lanyards

Our webbing shock absorbing lanyards are made from the highest quality polyester webbing with synthetic stitching. A tear-out section is employed to reduce the forces and limits the effects on a user in a fall below 6kN. These lanyards come standard with double action hooks but most models are also available with triple locking carabiners.

All of our Webbing Shock Absorbing Lanyards are AS/NZS 1891.1:2007 compliant.

Fixed-length

Note: to comply with AS/NZS 1891.1:2007, lanyards can be no more than 2m in length. If you intend to use your lanyard with a D-Ring Extension Strap, be sure to choose the 1.5m lanyard.

It's not about the harness, it's all about the block

When it comes to ensuring your safety in fall-risk situations, it is crucial that the Energy Absorbing Block attached to the harness is rated to your weight. In the same way that trucks require stronger brakes than cars, heavier people need stronger blocks to absorb the energy of their falls. Although our harnesses can hold many times the weight of an average person, the energy generated in a fall varies greatly depending on the weight of the person, so choose the block that's right for you.

Use this chart to determine which block is suitable for you:

Energy absorbing blocks

Easy to add to your own safety system, these are the same top quality energy absorbing blocks we use in all our shock absorbing lanyards. Also available with carabiners.

Please note: your choice of block is dependent on the weight of the user. Please see overleaf for more information.

Mini energy absorbing block

Features

A compact block for when space is tight. Rated for users up to 120kg. Blocks - Energy Absorbing.

Product Codes

S009KMINI	Mini Energy Absorbing Block
S009KCMINI	Mini Energy Absorbing Block with Carabiners

Energy absorbing block

Features

Rated for users up to 120kg.

Product Codes

S009K	Energy Absorbing Block

Customisable energy absorbing block

Features

When our standard blocks don't meet your requirements, you can choose from the following custom options:

- A variety of webbing colours
 - Your logo printed on the label (see page 130.)
 - Attachment hardware including double action and scaffold hooks.
- Rated for users up to 120kg.

Product Codes

S009	Energy Absorbing Block
S009C	Energy Absorbing Block with Carabiners

Energy absorbing block cover

Features

This detachable cover is made of hard-wearing Cordura fabric and is designed to protect energy absorbing blocks from dirt & abrasive surfaces. When used correctly, the loops of the block protrude from each end so it is still easy to attach to your lanyard. The cover is held in place by strong Velcro.

Product Codes

HS03	Energy Absorbing Block Cover
------	------------------------------

Fixed-length Lanyards

Note: to comply with AS/NZS 1891.1:2007, lanyards can be no more than 2m in length. If you intend to use your lanyard with a D-Ring Extension Strap, be sure to choose the 1.5m lanyard.

- Tested to AS/NZS 1891.1:2007 at 100kg.
- Additional test conducted at 150kg.
- Total deployment may be achieved at fall factor 2 and a mass of 150kg.

Heavy duty single leg lanyard

Retractable Lanyards

We have a range of retractable lanyards with either internal braking mechanisms or shock absorbing blocks, using either webbing or steel cable.
All retractable lanyards conform to EN 360.

The AS/NZS 1891.3 standard stipulates any material supplied from overseas that complies with EN 360, EN 353-2 and EN 353-1 is acceptable for use in Australia and New Zealand.
(EN 360: Retractable Type Fall Arresters; EN 352-2: Guided type fall arresters – Flexible Anchorage Line; EN 353-1: Guided Type Fall Arresters – Rigid Anchorage Line and Rails).

2m webbing retractable lanyard

Features

This light-weight 2m Webbing Retractable unit has an internal braking system to reduce the fall forces.

- Fully serviceable at the QSI facility.

Certified to: EN 360:2002

Product Codes

SRLWB02	2m Retractable Lanyard
---------	------------------------

2.5m retractable lanyards

Features

This retractable webbing lanyard extends to 2.5m and has a shock absorbing block which will deploy in the event of a fall, limiting forces to below 6kN.

The lanyard has been manufactured with triple locking carabiners at both ends, giving a far superior level of safety than what screw-gate carabiners offer.

Available with swivel attachment at anchorage end, with fall indicator.

- Retractable Webbing 47mm wide.
- Maximum length: 2.5m
- Integrated energy absorbing block.
- Steel triple locking carabiners at anchorage and attachment ends.

Certified to: EN 360:2002

Product Codes

SRL2002	2.5m Retractable Lanyard
SRL2002SW	2.5m Retractable Lanyard with Swivel

2m micron block retractable lanyard

SCALE DIAGRAM SHOWING RELATIVE SIZE OF THE 2M MICRON BLOCK COMPARED TO A TRIPLE LOCKING CARABINER.

Servicing

Many of our retractable lanyards and cable blocks are serviceable, meaning they can be disassembled by an expert following a fall, checked for damage and made usable again.

All retractable lanyards must be inspected on an annual basis according to the AS/NZS 1891.1:2007 standard. When necessary, they can be inspected by QSI's technical department.

Features

The Micron Block is a compact, lightweight retractable lanyard with integrated shock absorbing block. At only 800g, it's very easy to carry.

To give you an idea of how small it really is, we've included an approximate scale image of our triple locking carabiner.

- Retractable 21mm width webbing.
- Maximum length: 2m
- Comes with your choice of 16kN gate steel snap hook or 16kN gate aluminium scaffold hook.
- MBL: 15kN
- Weight: 0.8kg
- Fully serviceable at the QSI facility.

Certified to: EN 360:2002

NOTE - All microns work in sharp-edge and horizontal usage.

3.5m retractable lanyards

Features

The new 3.5m unit gives extra reach and has an internal braking system to reduce the fall forces.

- Webbing and Stainless Steel Cable versions available.
- Fully serviceable at the QSI facility.

Certified to: EN 360:2002

Product Codes

SRLSS3.5	3.5m Retractable Lanyard - Stainless Steel Cable
----------	--

6m retractable lanyard

Features

Casing is made of light Aluminium Alloy and comes with 25mm wide webbing. Swivel action eye prevents rope from twisting while working or in the event of a fall.

- Fully serviceable at the QSI facility.

Certified to: EN 360:2002

Product Codes

SRLWB06	6m Webbing Retractable Lanyard
---------	--------------------------------

Cable blocks

Features

These retractable cable blocks extend to 10m, 15m and 30m lengths and come in a tough, robust plastic casing.

Swivel hook attachment reduces twist problems while in use and helps the user when they need to turn around, etc. The hook also has a load indicator which shows green when safe to use and red when unit has had a substantial loading and should be inspected.

Unique to this unit is a spring at the base of the cable to stop it locking permanently if accidentally fully retracted. The user can simply push in against the spring to release the cable again, unlike other models which require the entire unit to be disassembled.

See also: "30m Retractable Block with Retrieval Winch" on page 185.

- Fully serviceable at the QSI facility.

Certified to: EN 360:2002

Product Codes

SRLS10	10m Cable Block
SRLS15	15m Cable Block
SRLS30	30m Cable Block

The spring at the base of our blocks prevents the cable from locking permanently when fully retracted accidentally. This allows the user to release the cable lock quickly and easily, unlike other brands which require the expensive disassembly of the entire block.

Cable blocks allow users a wide range of movement while maintaining a high level of safety. They can be positioned at the top of ladders or scaffolds, gently retracting and extending up to 30m as the user climbs and moves around, safe in the knowledge that any fall will be broken in a split second.

Slings

QSi designs and produces its slings using only the highest quality polyester webbing and synthetic stitching. Slings are used to create temporary anchor points where permanent anchor points are not available. Ideal for use around large pipes, beams, pylons, and other structures where normal hooks are not suitable.

Note on Standards:

Our slings conform to EN 795 as there is no comparable AS/NZS standard for slings. However, AS/NZS 1891.1:2007 requires attachment points to have a 15kN MBL rating, which our slings exceed with a 24kN MBL.

Beware of manufacturers claiming their slings are AS/NZS 1891.4 compliant as this is merely a labelling and documentation standard, not an actual equipment standard.

Webbing Width Chart (1:1 scale)

20mm webbing endless round sling

Features

Made with 20mm webbing.
MBL: 24kN.

Certified to: EN 795

Product Codes

Webbing endless round sling - with wear protection sheath

Features

QSi's industrial strength webbing endless round sling includes a wear protector ensuring long life and increased user safety.

This makes it perfect for anchorage around poles, beams and other high-friction areas where regular slings would wear out much faster.

A safe working load of 2000kg gives you a level of security far greater than standard industrial slings.

Product Codes

SLIWEBRG1	Webbing Endless Sling - Industrial Strength - 1m
SLIWEBRG2	Webbing Endless Sling - Industrial Strength - 2m

How to use a sling

Step 1

Drape sling over anchor point, hold both ends.

Step 2

Bring both end loops of sling together.

Step 3

Feed carabiner through both loops.

Step 4

Ensure sling is not caught in gate before locking carabiner.

Personal adjustable sling - 1.5m

Features

Personal Adjustable Sling adjusts from as long as 1.5m to as small as 620mm.
MBL: 17kN

Product Codes

SLIADJPN	Personal Adjustable Sling 1.5m
----------	--------------------------------

Cross arm sling

Features

Anchor sling designed to thread around anchorage point and back through itself.

- Three layers of webbing give extra security.
- Standard length: 84cm
- Customised lengths also available on request, but please remember that longer lengths add to the overall fall distance.
- Available with protective wear shield to prevent damage to webbing from abrasive surfaces
- MBL: 24kN

NOTE: While the carabiner can pass freely through the large ring, the standard model requires that the carabiner be removed before threading sling through the ring. It takes a little longer to set up but cannot feed back through itself once carabiner is reattached.

Product Codes

SLICARM	Cross Arm Sling
SLICARMLR	Cross Arm Sling with Large Ring
SLICARMP	Cross Arm Sling with Protective Shield
SLICARMLRPS	Cross Arm Sling with Large Ring and Protective Shield

Carabiner can pass through large ring

Carabiner cannot pass through standard ring

Daisy chain sling

Features

Made with 20mm webbing. Stitched loops allow quick changes in length by simply moving carabiner between loops. Each loop is rated to 3kN.

Product Codes

Gear Bags

Custom branding available on all gear bags

Height safety gear can often be heavy and cumbersome, so it makes sense to use a suitable bag to carry it in. Not only that, when you have invested a lot of money in gear that could save your life, you would be wise to protect that investment.

We stock a wide range of bags from lightweight backpacks through to heavy duty, reinforced PVC tote bags, all hand picked to be robust enough for our ropes, lanyards, harnesses and hardware.

Note: Colours and styles are subject to availability, and may change from time to time.

QSi gear bag - medium

Features

Our Rope Bags come in sizes to suit a wide variety of rope lengths up to 200m. They have many great features to make hauling your height safety equipment so much easier. There are also customising options to give your bags the personal touch. Colours can be made to order.

Features include:

- Robust adjustable shoulder straps
- Draw string toggle closing
- Eyelets in bottom for rope to be tied through
- Wear-webbing to protect rope
- Generous capacity allows a helmet or harness to be carried along with the rope.
- Many colours available
- Customised printing on bags available (POA)

Because longer ropes are much heavier, the 200m bag also includes easy carry handles on the side at the top of the bag to enable two people to lift it easily.

Product Codes

Scaffold height safety kit

Features

This kit gives you everything you need to work safely at height on industrial scaffolding. The 2m adjustable shock absorbing lanyard clips onto scaffold tubing quickly and easily, and allows the user to work in restraint. The sling can create a safe anchor point when you are unable to clip onto the scaffolding itself. Also available with a premium full body Harness, see pg. 119.

Kit Contents:

- 1 x SBE2KQR Full body harness with quick release buckles
- 1 x HS807-15 1.5 metre 20mm Webbing Endless Round Sling
- 1 x S017 2m Adjustable Single Leg - 1 Double Action hook and 1 scaffolding hook
- 1 x HELMETQTECHCO Industrial Safety Helmet
- 1 x BAGKITRB Gear Bag
- 1 x MC001 Carabiner

Product Codes

SK01	Scaffold Height Safety Kit
------	----------------------------

Construction height safety kit

Features

This kit is designed to provide height safety protection for construction workers. The large anchor sling allows the user to create a safe anchor point from beams and other structural members, and the retractable block allows a wide range of movement without compromising safety. Also available with a premium full body Harness, see pg. 119.

Kit Contents:

- 1 x SBE2KQR Full body harness with quick release buckles
- 1 x HS807-15 1.5 metre 20mm Webbing Endless Round Sling
- 1 x SRL2002 2.5m Retractable Block
- 1 x BACKPACKRB Backpack
- 1 x MC001 Carabiner

CK01	Construction Height Safety Kit
------	--------------------------------

Using a Roof Kit

Roof kits are designed to provide a simple, secure, temporary safety line on pitched roofs. All they require is a secure anchor point and a roof ridge-line above where the user will work. There are several ways to create a safe anchor point for your rope, such as attaching a sling to an existing solid structure or using a QSI Temporary Roof Anchor or Ground Anchor. Always ensure the anchor point is on the opposite side of the roof from where you wish to work, and always follow instructions supplied with your equipment.

All QSI Ropes and Rope Grab combinations are tested and certified to AS/NZS 1891.3

Step 1: Setting up Anchor Point

Anchor Point using Temporary Roof Anchor

1. Remove row of four roof fixings and position anchor on roof so holes are aligned.
2. Fix Anchor to roof with supplied screws through existing holes.

Anchor Point using Endless Sling:

1. Locate a suitable object such as a sturdy tree, the wheel or axle of a car or truck, or a large, concreted fence post.
2. Loop sling around object and back through itself.

Step 2: Setting up Rope

1. Fix rope to anchor point using supplied carabiner.
2. Using the bagged rope as a dolly, throw bag over roof. Alternatively, use a QSI Throw Dolly to toss a draw line across the roof, attach rope to line and pull across roof.

3. Attach Rope Grab to rope and tie tail end of rope to a suitable attachment point to prevent lateral movement.

Step 3: Attaching to Rope

1. Attach chest connector to harness and rope grab before you leave the ground.
2. Always work from a position below the apex of the roof. Only use short lanyard connectors of 450mm or less (inc hooks/carabiners).

1. Refer to instruction manual supplied with roofing kit for specific safety and best-practice instructions.

Economy roofing kit - kernmantle

Features

Our Economy Roofing Kit is a simple roof kit intended for basic roof work. It is anchored on the opposite side of the roof to where the work is done.

A manual rope grab keeps the user attached to the rope.

Rope and Rope Grab combinations are certified to AS/NZS 1891.3.

Kit Contents:

- 1 x 20 meters of 11mm kernmantle rope with 1 x sewn eye loop and 1 x stop knot (SKR11/20-SELISK)
- 1 x RG011 Manual rope grab
- 1 x S009KC Mini energy absorber block with carabiners
- 1 x MC001 carabiner
- 1 x HS807-15 1.5 metre 20mm Webbing Endless Round Sling
- 1 x SBE2K Full body harness
- 1 x 50m rope bag (BAGKITRB)

Product Codes

Recommended accessories

Temporary Roof Anchor

Throw Dolly

Commercial roofing kit - kernmantle

Features

The commercial roofing kit was designed for professional tradesmen who need safe, temporary access to roof tops. It has 30 meters of kernmantle rope to allow for greater flexibility and more applications. The sewn end is anchored to a suitable point on the opposite side of the roof to where the work is done. A robust steel rope grab keeps the user attached to the rope. There is no need for a shock block due to the kernmantle rope having sufficient stretch to reduce the fall force. The kit is designed to be used in restraint and the fall distance must be kept below 600mm.

Rope and Rope Grab combinations are certified to AS/NZS 1891.3.

Kit Contents:

- 1 x 30 meters of 11mm kernmantle rope with 1 x sewn eye loop and 1 x stop knot (SKR11/30-SELISK)
- 1 x RG012 rope grab
- 2 x MC001 carabiner
- 1 x HS807-10 1 metre 20mm Webbing Endless Round Sling
- 1 x HS807-20 2 metre 20mm Webbing Endless Round Sling
- 1 x SBE9 Full body harness
- 1 x 50m rope bag (BAGKITBL)

Temporary anchor points

Most commercial buildings are not built with height safety in mind, so it can be difficult to find a safe, secure anchor point for your rope or lanyard. With this in mind, we supply a range of innovative permanent and temporary anchor systems that allow you to utilize the natural features of commercial buildings to create a safe working environment.

Parapet anchor

Features

- Material: High strength steel galvanized to provide corrosion protection.
- MBL: 5000 lbs/23kN
- Flange width adjustable from 60 mm to 360 mm.
- Net Weight: 8575g

Certified to: EN 795: 2012 Type B and ANSI Z 359.1: 2007

Product Codes

Beam anchor trolley

Features

Mount the Beam Anchor Trolley onto an I-Beam to create an instant rolling anchor point that will follow the user as they work. Must be mounted on a level horizontal beam to ensure the user does not travel in the event of a fall.

- Material: Aluminium and Stainless Steel
- MBL: 5000lbs/23kN
- Flange width adjustable from 80mm to 250mm.
- Net Weight: 4.155 kgs ±100g

Certified to: EN 795: 2012 Type B and ANSI Z 359.1: 2007

Product Codes

MHA005 Beam Anchor Trolley

Edge anchor

Features

The Edge Anchor is adjustable for depth to suit a variety of roof cladding profiles. An optional large cladding insert enables the anchor to be fitted onto deeper roof profiles. It is robust, lightweight, collapsible & portable for easy transport, storage and usage. The energy absorbing arm with fall indicator provides additional safety for the user.

- Material: High Strength Aluminium Alloy.
- Minimum Breaking (System) Strength: 15 kN.
- Net Weight: 3000gm ± 10gm.
- Conforms to EN 795 : 2012 Type B

Product Codes

HS20 Edge Anchor

Door anchor

Features

Create a safe, temporary anchor point for up to two users using most single door frames. Designed to be installed on frames from 60cm to 125cm wide. Comes complete with a carry bag.

- Material: Aluminium Alloy
- Door frame width range: 60cm - 125cm
- Net Weight: 4.73 kg ±100g

QSi's temporary roof anchor: simple, safe and versatile

QSi's patented Temporary Roof Anchor provides a secure attachment point by fixing directly to the timber joists and purlins through corrugated roofing iron. The patented design and heavy duty steel construction spreads any potential load across the roof structure, and the foam padding protects the corrugated roofing from damage.

Temporary roof anchor

Features

- Temporary roof anchor designed for single person use.
- Designed to be attached onto AS/NZS certified New Zealand Wooden Roof structures.
- This roof anchor should only be used on roofs that are structurally sound.
- In order to safely arrest a fall, ensure that the minimum clearance distance is provided.
- The roof anchor must be installed by a competent person who is trained to work at height.
- New Zealand Patent Application No. 713603
- Australian Patent Application No. 2015246153
- New Zealand Registered Design Application No. 419489

Certified to: AS/NZS 5532:2013

How to build your own rope kit

Step 1. Choose your rope diameter

Product Codes

SKR11	11mm Kernmantle rope
SKR12	12mm Kernmantle rope

Step 3. Choose your rope end options

Sewn Eye Loop

Available on one or both ends. May also include a Carabiner (see pg. 197)

Stop Knot

Available on one end only

Product Codes

	Rope only (blank ends)
-SEL	1 x Sewn eye loop
-SELSK	1 x Sewn eye loop & 1 x stop knot
-2SEL	2 x Sewn eye loops

Each of these options requires an additional 0.5m of rope which will be added to the total length.

Step 2. Choose your rope length

Product Codes

SKR11/	Available sizes - 5, 10, 15, 20, 25, 30, 35, 40, 45, 50 meter lengths
SKR12/	Available sizes - 5, 10, 15, 20, 25, 30, 35, 40, 45, 50 meter lengths

Step 4. Choose your optional extras

Gear Bags

Grab one of our gear bags for your kit. See our bag range from page 157.

Rope Grabs

Add a rope grab to your kit. See our rope grab range from page 176.

Carabiners or Hooks

Add carabiners or hooks to your kit. See our range from page 195.

NOTE - If you require a rope grab, carabiner or hook fitted to a rope, please contact us *before* manufacture starts.

Ordering your kit. Create your own rope kit

Example: You need 20mtrs of 11mm Kernmantle Rope with sewn eyes on both ends.

Here is the code you would use: **SKR11/20-2SEL**

Example: You need 50mtrs of 12mm Kernmantle Rope with one sewn eye-loop and one stop knot.

Here is the code you use: **SKR12/50-SELSK**

Note - If this all seems a little overwhelming and you need some assistance in choosing the best kit for your needs, just give our sales team a call, and we'll be happy to explain the options!

Kernmantle rope

Features

All QSI's Kernmantle ropes have a high strength polyester sheath to protect the rope against sharp edges during a fall. Sold by the metre (or see next page for ready-made rope kits)

Certified to: AS/NZS 4142.3: 1993 or EN Standard also available

Product Codes

Ready-To-Go rope

Features

These ready-made rope packages are an ideal starting point for those who are new to height safety.

Rope is Certified to: AS/NZS 4142.3:1993.
EN Standard also available.

Package includes:

- A length of kernmantle rope.
- Sewn and labelled with a captive eye and stopknot.
- A carabiner through the loop.
- A robust bag to carry it in.
- Rope - Ready to go

Product Codes

READY20GO	20m 11mm Kernmantle Rope with sewn eye+stopknot & sewn label & Carabiner in Bag
READY30GO	30m 11mm Kernmantle Rope with sewn eye+stopknot & sewn label & Carabiner in Bag
READY40GO	40m 11mm Kernmantle Rope with sewn eye+stopknot & sewn label & Carabiner in Bag
READY50GO	50m 11mm Kernmantle Rope with sewn eye+stopknot & sewn label & Carabiner in Bag

Optional Accessories

- Rope Grab attached to line
- Stop Knot.
- Custom bag branding

Rope shield

Features

Our PVC Rope Shield edge protector has Velcro closing making it easy to fit after rope has been set up. To fit 8-16mm rope.

Product Codes

SRS01	PVC Rope Shield edge protector - 450mm

Rope eye protectors

Features

Two models suitable for 8-11mm and 11-14mm diameter rope. Used on rope loops as a wear protector.

Product Codes

RP2087	Rope Eye Protector - 8-11mm
RP2088	Rope Eye Protector - 12-16mm

Webbing protective sleeve

Features

Designed to protect flexible anchorage lines against abrasion on sharp edges.

- Made of 44mm polyester tubular webbing.
- Moveable along the length of the anchorage line.
- Non-detachable.
- Standard length is 30cm, other lengths available on request.

Product Codes

PR01	Polyester Protective Sleeve
------	-----------------------------

PVC removable protective sleeve

Features

Designed to protect flexible anchorage lines against abrasion due to friction.

- Made of flexible PVC.
- Detachable from line thanks to hook and loop fastening.
- Open width: 130mm. Folded width: 50mm.
- Standard length: 55cm.

Product Codes

PR02	PVC Removable Protective Sleeve
------	---------------------------------

Rope grabs

These devices allow users to safely ascend and descend ropes. When the user puts weight on their harness, either intentionally or in a fall, the Rope Grab mechanism binds with the rope to prevent the user from falling. There are various types of rope grabs that operate in different ways.

How to choose a Rope Grab

There are several features to consider when choosing a rope grab. Use the icons to help you choose the most suitable for you:

Removable or Fixed to the Rope

Icon indicates whether or not the rope grab is fixed to the rope or removable without having to slide it off the end of the rope. Fixed rope grabs are permanent if the rope has a stop knot or loop at each end.

Polyamide or Kernmantle Rope

Icon indicates whether the rope grab is suitable for Polyamide or Kernmantle rope. Note: all rope grabs on Polyamide rope must be used with a shock absorbing block.

Manual or Automatic Fall Arrest

Icon indicates whether rope grab has an automatic or manual fall arrest mechanism. Manual rope grabs grip the rope by default and must be manually released to enable the user to move. Automatic rope grabs slide freely until a fall causes them to lock onto the rope.

Steel or Alloy Construction

Icon indicates whether rope grab is of steel or aluminium alloy construction. Choose steel for added strength and long life, or alloy when light weight is important.

Steel rope grabs

Features

Our steel rope grabs are tested to the AS/NZS 1891.3 and EN standards. Be sure to choose the model that suits the type of rope you wish to use. Contact us for more information.

Certified to: AS/NZS 1891.3 and/or EN567 depending on rope grab.

Product Codes

RG001	Fixed Steel Rope Grab - Manual Fall Arrest - for 12-16mm Polyamide rope
RG009	Fixed Steel Rope Grab - Automatic Fall Arrest - for 16mm Polyamide rope
RG011	Fixed Steel Rope Grab - Manual Fall Arrest - for 11-12mm Kernmantle rope
RG012	Fixed Steel Rope Grab - Automatic Fall Arrest - for 11-12mm Kernmantle rope
RG013	Removable Steel Rope Grab - Automatic and Manual Fall Arrest - for 11-12mm Kernmantle rope

Note: QSI Rope Grabs have been tested on QSI supplied rope only and we cannot guarantee that they will work correctly on rope from other manufacturers.

Alloy rope grabs

Features

Strong, light weight alloy rope grabs tested to the AS/NZS 1891.3 and EN standards. Suitable for use on a wide diameter range of kernmantle rope.

Certified to: AS/NZS 1891.3 and/or EN341 Class A depending on rope grab.

Note: QSI Rope Grabs have been tested on QSI supplied rope only and we cannot guarantee that they will work correctly on rope from other manufacturers.

Product Codes

Ascenders - alloy

Features

Robust alloy rope ascender in left and right handed, and chest versions. Suitable for use with 8-13mm kernmantle rope.

Certified to: EN567

Product Codes

RG8088L	Left Handed Ascender
RG8088R	Right Handed Ascender
RG8088C	Chest Ascender

2-way stop descender - alloy

Features

The unique feature of this descender is the double-stop action. When under load, the descender automatically stops, locking onto the rope; if the user panics and either squeezes handle too hard or lets go, it will also stop. For use on 11mm kernmantle rope.

- SWL 150Kg
- Weight: 465g

Certified to: EN341 Class A

Product Codes

MP219911	Descending Device - Alloy
-----------------	---------------------------

2-way stop grip descender - alloy

Features

Works in a similar way to the standard 2-way Stop Descender, but with a more ergonomic grip handle. Ideal for descent on a single rope, it is equipped with a unique Self Braking System which initiates the brake as soon as the handle is released, or clasped too tightly. Works on 10mm to 12mm diameter Kernmantle rope

- Net Weight: 335.5g
- Finish: Coloured, Anodized

Certified to: EN341 Class A

Product Codes

MP401	Grip Descender - Descender Device for 10mm-12mm Kernmantle Rope
--------------	---

Telescopic pole system

Our Telescopic Pole is a perfect solution for creating overhead anchors at otherwise unreachable heights. Made of lightweight fibreglass, it is easy to carry and provides a simple, effective way to install an anchorage point from a distance. Comes with the Aluminium Anchorage hook (MH154), to anchor at the required distance.

Features include:

- Total weight (without hook): approx. 4.6kg
- Working reach when extended: 10.5m
(This includes 8.95m of fully expanded length, the 1m extension section and 1.55m of user's height.)
- Open expanded length of Telescopic Pole: 7.95m.
- Closed length of Telescopic Pole: 1.95m
- Voltage Rating: 30KV

Telescopic pole

Features

Fall clearance and line deflection diagram

Horizontal life line - SLL3000

Features

It's rare that you'll find yourself in a situation where an ideal anchor point is in just the right place. That's where the horizontal life line comes in.

Using just two sturdy anchor points in the general area of your work space, you can set up a life line strong enough to take the weight of two users, giving you unprecedented freedom of movement to help you get the job done faster.

Specifications

- Two person temporary webbing life line with sturdy carry bag.
- Max length: 20m.

EN certified for two persons. Complies to EN 795 Class B.

Product Codes

SLL3000	Horizontal Life Line
---------	----------------------

Note: When used at full extension, beware of bowing effect in middle of lifeline. Set anchor point heights to compensate. See Fall Clearance and Line Deflection Diagram above.

4 Man temporary horizontal rope anchorage line - HS3001

Features

- Rope type: kernmantle rope 16mm
- Tensioner: aluminium & stainless steel
- Attachment ends: swivel brass connector and stop knot
- Anchor type: forged alloy steel O-rings (x4)
- Max no. of users: 4 users
- Max span length: 5 to 25m
- Weight: 9.27kg ± 0.10kg

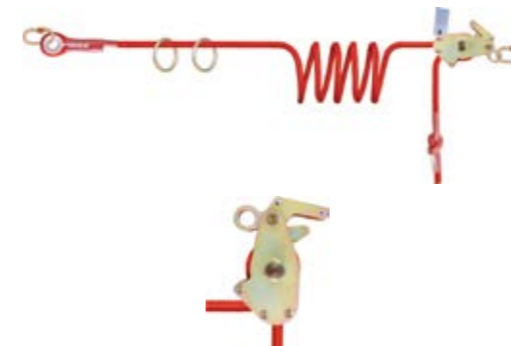

Conforms to: EN 795:2012 Type C & TS 16415 Type C

Product Codes

HS3001	4 Man Temporary Horizontal Rope Anchorage Line
--------	--

Note: When used at full extension, beware of bowing effect in middle of lifeline. Set anchor point heights to compensate. See Fall Clearance and Line Deflection Diagram on previous page.

2 Man temporary horizontal rope anchorage line - HS3002

Features

- Rope type: kernmantle rope 16mm
- Tensioner: steel
- Attachment ends: stitched loop and stop knot
- Anchor type: forged alloy steel o-rings (x2)
- Max no. of users: 2 users
- Max span length: 5m to 25m
- Weight: 9.05kg ± 0.10kg

Conforms to: EN 795:2012 Type C & TS 16415 Type C

Product Codes

HS3002	2 Man Temporary Horizontal Rope Anchorage Line
--------	--

Note: When used at full extension, beware of bowing effect in middle of lifeline. Set anchor point heights to compensate. See Fall Clearance and Line Deflection Diagram on previous page.

Rescue kit

Features

This Rescue Kit is manufactured using approved components in QSi's factory which carries the AS/NZS ISO 9001:2008 certification. Kit Contains:

- 2 x Large Twin Pulleys (EN 12278 & CE certified: Rated 30kN)
- 1 x Swivel carabiner (EN 362:2004/B & CE certified: Rated 25kN)
- 1 x 50kN offset carabiner (EN 362:2004/B & CE certified: Rated 50kN)
- 1 x 23 kN alloy scaffold hook with wing on gate. Can be used with rescue pole for easy connection to casualty. (EN 362:2004/EN 12275)
- 11mm Kernmantle rope (AS/NZS 4142.3:1993 or EN 1891:1998)
- 1 x Rope control device attached to rope (EN 358:2000)
- 1 x Webbing Round Sling (UTS: 24kN)
- 1 x Delta Link (UTS: 30 kN)
- 1 x Rope Bag (100m or 200m)
- 1 x Rescue Pole

Product Codes

HSR035	35m Rescue Kit - 150m of rope
HSR050	50m Rescue Kit - 200m of rope

Pole top rescue kit

Features

This kit provides an ingeniously simple method of rescuing a worker who has fallen from their ladder and is suspended by their lanyard from a crossmember. Simply loop the rope over the cross member, loop it back around itself several times and clip the carabiner to the worker's harness chest loops. Once released from their lanyard, they can be lowered gently to the ground thanks to the friction of the rope looped around itself.

Tripod with double pulley head - 7ft

Features

This double pulley tripod provides a robust, portable anchorage point, giving you access to confined spaces for personnel and materials.

Tripod specs and features include:

- Fully adjustable telescopic legs, adjustable height from 1.19m to 2.18m
- Multiple attachment points: two auxiliary eye bolts and mounted pulleys
- Support shoes with rubber soles improve grip and stability.
- Includes carry bag and in-built fixture for attaching the winch (can be removed on request).
- Cast aluminium head.
- Light weight, only 17.2kg.
- Footprint diameter (max): 1.5m internal and 1.86m external
- Strength of anchorage point: greater than 12kN.
- Maximum load capacity: 500kg

Certified to: EN795:2012 Type B

Product Codes

SRT1001DP	Tripod Double Overhead Pulley - 7ft
-----------	-------------------------------------

Tripod with double pulley head - 10ft

Features

This double pulley tripod provides a robust, portable anchorage point, giving you access to confined spaces for personnel and materials.

Tripod specs and features include:

- Fully adjustable telescopic legs, adjustable height from 1.76m to 2.72m
- Multiple attachment points: two auxiliary eye bolts and mounted pulleys
- Support shoes with rubber soles improve grip and stability.
- Includes carry bag and in-built fixture for attaching the winch (can be removed on request).
- Cast aluminium head.
- Weight: 21.8kg.
- Footprint diameter (max): 2.0m internal and 2.36m external
- Strength of anchorage point: greater than 12kN.
- Maximum load capacity: 500kg

Certified to: EN795:2012 Type B

SRW1001 winch

Features

Winch specs and features include:

- Bolting fixture for robust fitting to tripod
- Cable length: 20m
- Maximum lifting load capacity as per EN 1496: 135 kgs
- Maximum lifting load capacity as per machinery directive 2006/42/EC : 250 kgs

Certified to: EN 1496:2006 (Class A)

Product Codes

SRW1001	Winch
---------	-------

Note: QSi recommend a backup cable block be used with this winch when raising or lowering a person (see pg. 145 onwards).

30m retractable block with retrieval winch

Features

This innovative design combines the safety of a fall arrest system with the convenience of a retrieval winch, giving you one of the most versatile cable blocks on the market.

It operates just like our other cable blocks, allowing the user full vertical motion in both directions with the safety of a fall arrest system.

However, in the event of a fall, instead of having to fetch a separate winch to extract the victim, the built in winch allows you lift them to safety immediately.

As a rescue tool, it also enables a rescuer to descend safely to the victim to assess the situation. As a height safety tool, it allows a worker to access difficult spaces before being winched back up by his colleagues.

- A locking pin on casing allows the block to be easily switched between fall arrest and winch modes
- Can be mounted on the leg of a tripod using specialised bracket (not included)
- MBL: 12kN
- Weight: 14.8kg
- Length: 30m

Certified to: EN 360:2002 and EN 1496:2006 Class A

Product Codes

SRLS20R	20m Retractable Cable Block with Hoisting Winch
SRLS30R	30m Retractable Block with Retrieval Winch
HS800(44)	Mounting Brackets for all Winches
HS800(45)	Mounting Brackets for Retrieval Blocks - 10m, 20m & 30m

HS818 winch

Features

Comes with an independent reel mode for quick and easy installation of the Winch. HS818 is also equipped with a secondary brake mechanism which reduces the dynamic load impact felt on the user in the event of the fall, to less than 6kN.

To be used for raising or lowering of personnel or material into confined spaces.

- Equipped with mounting plate and four bolts for mounting to QSi Tripods and Davits
- Comes with 20m galvanized steel wire rope, 6mm diameter. Up to 40m length available on request
- Includes swivel steel snap hook as connector
- Maximum lifting load capacity as per EN 1496: 135 kgs
- Maximum lifting load capacity as per machinery directive 2006/42/EC : 250 kgs
- Conforms to EN 1496:2006 (Class B)
- To be used with retractable fall arrester when raising or lowering of person

Also available with stainless steel wire rope.

Product Codes

HS818	Winch
-------	-------

Spreader bar

Features

The Dynamic Confined Space Spreader Bar has specially designed attachments to be used on all standard shoulder straps for confined space rescue and retrieval with most of our harnesses.

Spreader Bar specs and features include:

- Snap Hooks attach directly to the shoulder straps of the harness. If required, the subject's arms can be raised above their head using the wrist straps.
- The attachment D-Ring connects to the retrieval system so the subject can be removed to safety.

Refer to AS/NZS 2865 for confined space procedures and practices as well as AZ/NZS 1891.4 for information on the selection, use and maintenance of fall arrest equipment.

Product Codes

DCSSB02	Dynamic Confined Space Spreader Bar
---------	-------------------------------------

Auto descender

Features

Our Auto Descender features automatic speed control thanks to a centrifugally controlled brake. The device keeps the speed constant for the entire descent run, enabling a swift and safe rescue. Speed remains the same irrespective of the person's weight.

Specifications:

- Max allowed descent height: 30m
- Max Load: 150kg
- Min Load: 20kg
- Descent speed: 0.80m - 1.50m/sec (depending on load)

Product Codes

AD003	Auto Descender with 30m of kernmantle rope

Rescue recovery stretcher

Features

The rescue recovery stretcher is an ultra-portable extremely flexible system. Ideal for search and rescue teams, it is particularly useful in situations where a fast recovery from difficult terrain is required.

- Inert to all conditions and body fluids
 - Rolls up for easy storage and carrying in a backpack
 - Extensive strapping to secure patient
- Weight: 8kg | Max Load: 200kg

Product Codes

PARA40R Rescue recovery stretcher

Q-Tech Shield Helmet

Choosing the right helmet:

When it comes to safety, it's important to pick the right gear for the job. Our Climbing and Rescue helmets feature a polystyrene liner designed to protect from multiple impacts, whereas our Industrial Safety helmets are built with a cradle liner designed to absorb shock.

Due to the inherent differences between these two systems, it is impossible to manufacture a single helmet that meets both standards. **Do not be misled by manufacturers who claim their helmets meet both standards.**

Product Features:

- Strong, light ABS plastic shell.
- Low-profile slots for clip-on hearing protection.
- Multiple clips hold head torch strap in place. (Torch not included.)
- Venting system allows a continuous flow of air across the head to keep the wearer cool and comfortable, while maintaining impact protection.
- Three-way adjustable nylon chin strap with robust, off-set clip.
- Headband ratchet wheel makes adjustment easy for a wide range of head sizes.

Available colours: White, Flouro Yellow, Orange, Red.
Note: Red only available as Industrial Safety Helmet.

Vented climbing and rescue helmet

Features

Fitted with a padded polystyrene liner designed to protect from multiple impacts. Visor attachment included.

Certified to: EN12492.

Q-Tech Trooper Helmet

Hands and feet are valuable, but they are useless without a fully functional brain. Protect yours with a QTECH Trooper Helmet from QSi. The QTECH Trooper Helmet is a non-vented, light weight and comfortable helmet with a built-in chin strap. Electrical insulation rating to Class E, 20,000 volts. Suitable for Electrical Line Work.

Standards:

- Manufactured to: AS/NZS 1801:1997
- ANSI Z89.1:2014 Type 1 Class E LT
- CE EN 397:2012+A1:2012
- EN 50365:2002 Electrician Class O

Product Features:

- Short peak
- Foam sweatband
- Strong, light ABS plastic shell
- 6-point webbing suspension system
- Simple wheel adjustment to fit most workers
- 3-point nylon chin strap with quick release buckle
- Multiple clips hold head torch strap in place (torch not included)
- Slotted integration of wide range of accessories (earmuffs, faceshields, visors)

Available colours: White, Yellow, Orange, Blue & Red.

Material Handling Webbing Straps

Material Handling Webbing Straps are an ideal aid for carrying heavy objects. The webbing sling keeps the user's hands away from the heavy object, helping to prevent accidental slippage and avoid potential injury when lowering. The different lengths of sling allow for ergonomic lifting techniques by enabling the load to be carried in an upright standing position, removing the need for bending and awkward twisting.

Material handling webbing straps

MATERIAL HANDLING STRAP HANDLE

MATERIAL HANDLING STRAP - 700MM

MATERIAL HANDLING STRAP - 1M

ADJUSTABLE MATERIAL HANDLING STRAP - 1.2M

Features

Material Handling Straps have a Maximum Break Load rating of 12kN. Material Handling Strap Handles have a Maximum Break Load rating of 500kg.

Product Codes

MHSH	Material Handling Strap Handle
MHS07	Material Handling Strap - 700mm
MHS10	Material Handling Strap - 1m
MHSA12	Adjustable Material Handling Strap - 1.2m

Directions for use:

1. Place webbing sling around object.
2. Feed metal ring through webbing loop.
3. Clip metal ring into hook on lifting handle.
4. Lift object. If load is heavy, add extra strap and have two people carry it.

Push / pull pole

Features

Our robust Push/Pull Pole has been designed to aid in the handling of cargo containers when loading and unloading on land or sea. It allows the user to safely push cargo containers away from them or pull netting, ropes, cables and containers towards them. This pole can also be used for retrieval of identification tags from containers.

This tool helps keep the user at a safe distance, to prevent crushing or pinching of hands and feet. **The heavy duty fibreglass pole and robust nylon head make a super strong tool capable of holding up to 250Kg.**

SPIPEPUSH1.3	1.3m Meter Pipe Push pole with handle
SPIPEPUSH1.8	1.8m Meter Pipe Push pole with handle

Catch-it pole

Features

The Catch-It Pole is a lightweight, extendable pole with a large hook designed for grabbing and moving ropes, cables and lanyards.

- Pole can be extended from 1.2m to 2.1m in 150mm increments.
- Hook dimensions: 250mm x 150mm

Product Codes

CATCHIT	1.2m - 2.1m Extendable Catch-It Pole
---------	--------------------------------------

1.4m pipe handling pole

Features

This phenomenal tool is designed for the rigours of the oil rig where physical abuse and corrosive substances are the norm and your life can depend on the quality of your equipment. Features include:

- Machined, corrosion resistant, high strength plastic head
- Flexible plastic nubs on the head provide extra grip on pipes.
- **Max load: 250kg**

Product Codes

SPIPHAN1.1	1.1m Pipe Handling Pole
SPIPHAN1.4	1.4m Pipe Handling Pole
SPIPHAN1.9	1.9m Pipe Handling Pole

Vertex HS8000 Vertical Anchorage Line System on Rigid Aluminium Rail

This vertical fall arrest anchorage system (Conforming to EN 353-1) is an integrated solution made up of a vertical aluminium guide rail over which glides a guided-type fall arrest trolley.

The line is constructed by attaching the 3m lengths of rail in series using a junction to connect them, and clamps to attach them to the ladder rungs. The trolley moves up and down on the line accompanying the user who is connected to it with an auto-locking steel carabiner.

In the event of a fall, the trolley immediately locks on the rail, thus arresting the fall. Also, while not in use, the unidirectional locking system of the trolley prevents it from sliding down on its own.

The rail comes with an extension arm that curves at the top of the ladder, over the working platform. This allows the climber to be connected to the trolley even at the ladder termination, ensuring complete safety.

The bottom section of the aluminium rail extremity is equipped with a trolley lock that prevents the trolley from moving out of the rail (see figure below).

Certified to: EN353-1:2002

Fall protection for:

- Industrial ladders.
- Chimney ladders.
- Telecommunication towers.
- Power transmission towers.
- Windmills.
- Cranes.
- Shafts and manholes.
- Petrochemical plants, on-shore and off-shore oil rigs.

Product Codes

HS8000	Vertical Anchorage Line System on Rigid Aluminium Rail
--------	--

Component List:

1	Extension	HS8000 (02)	Material: Extruded aluminium alloy Length: 1.5m
2	Rail	HS5000 (01)	Material: Extruded aluminium alloy Length: 3m
3	Vertical Trolley	HS8000 (01)	Material: Stainless Steel (316) Trolley with brass wheel which provides frictionless movement.
4	Carabiner	HS111	Quarter turn auto-locking steel carabiner
5	Rung Clamp	HS8000 (03)	Material: Stainless Steel 316 Attaches the system onto the underlying ladder
6	Junction	HS5000 (08)	Material: Stainless Steel 316 Used to connect two rails together.
7	Rail Extremity	HS5000 (02)	Material: Extruded aluminium alloy Length: 3m

Vertex HS7000 Vertical Anchorage Line System on Rigid Cable Line

The Vertex HS7000 vertical anchorage line protects the user from a fall while ascending or descending a ladder. The unique feature of this system is a permanent installed stainless steel shock absorber at the top of the line. This offers distinct advantages over the textile absorbers used in other lines in terms of UV degradation and resistance to harsh climatic conditions.

The Vertical Anchorage Line is made of Stainless Steel wire rope. It is held in a rigid position by use of 2 mounting brackets—one at the top and one at the bottom.

The Stainless-steel Rope Grab is directly connected to the user without an additional lanyard.

To maintain the rigidity and high tension in the anchorage line, a screw type mechanical tensioner is provided at the end of the anchorage line at the bottom, connecting it to the lower mounting bracket.

The system is available in five sizes for ladders from 10m to 50m in height.

Also available is an optional Extension Arm to extend the system above the platform for safe disengagement of Fall Arrester from the system while standing on the platform.

Certified to: EN353-1:2002

Fall protection for:

- Industrial ladders.
- Chimney ladders.
- Telecommunication towers.
- Power transmission towers.
- Windmills.

Features and benefits:

- MOC: Stainless steel grade 316.
- Shock absorber reduces impact of fall on user as well as receiving structure.
- Suitable for 1 person.
- Intermediate cable guides every ten metres to reduce vibrations caused by wind pressure.
- Trained installers and engineers to install the system.

Vertex hs9000 industrial fall protection ladder

Features

The Vertex HS9000 is an integrated ladder and fall protection system. The low-profile design can be mounted on many structures to allow safe, easy access to high areas.

Certified to: EN353-1:2002

Fall protection for:

- Buildings
- Chimneys
- Wind Turbine Towers
- Transmission Towers
- Advertising Billboards.

Features and benefits:

- Continuous ladder with fall protection can negotiate bends.
- Corrosion free anodized aluminium rail.
- Hot-dipped galvanized rungs.
- Four-wheel trolley slides freely on the central rail and locks in place in the event of a fall.
- Assists in climbing. The unique design of trolley supports the user while ascending or descending.
- Locking jibs at either end to prevent unintentional release of trolley from the rail while in use.
- Aluminium rail extension to safely remove the trolley after reaching the landing platform.

Davit arm system

Features

QSi introduces the new Davit Arm which provides a safe and secure system for easy access to confined spaces. The Davit Arm is an ideal choice to provide overhead anchorage which can be mounted on different bases and it conforms to EN 795:2012 Type A.

The Davit Arm is made of highly corrosion resistant stainless steel, and can swivel a complete 360 degrees on its mounted base, hence providing a versatile reach and access.

A unique feature is the adjustable height of the cantilever arm at 3 defined points, with upper arm position of 2.3m, middle arm position of 1.9m, and lowered arm position at 1.5m. This enables the use of the Davit Arm even in those areas where the roof height is small.

The Davit Arm can be easily mounted on the floor as well as on the wall through special floor and wall mounting brackets which are available as required. The Davit Arm can also be mounted on the floor of heavy vehicles, making it extremely versatile.

QSi Winch HS 818 and SRW1001 can be easily mounted on to the Davit Arm with the help of stainless steel fasteners.

Retrieval Fall Arrester Blocks (SRLS10R, SRLS20R and SRLS30R) can also be installed for easy retrieval & arresting the fall of the user using the specialized mounting brackets; Ref. HS900(06), HS900(07) & HS900(08) respectively.

Product Codes

Restraint systems explained

While the primary focus of height safety in Australia and New Zealand is Fall Arrest, it is also important to consider the role of Restraint products. First, we need to understand the differences:

	Fall Arrest	Restraint
Products	Designed to safely absorb forces and prevent serious injury in the event of a fall.	Designed to restrict a worker's movement so there is zero risk of fall.
Worker	Free to move around their work space. Responsible for preventing themselves from falling.	Restricted to a very specific work space. Can rely on equipment to prevent them from falling.
Standards	Complies with AS/NZS Standards	Does not comply with AS/NZS Standards

While there are no AS/NZS standards covering restraint products, we apply the same tests to them as we do our fall arrest products. For example, we static load the attachment points with 15kN for three minutes just as we would for any product that meets the 1891.1:2007 standard.

Restraint products are necessary in some work situations where a worker must operate in a position that would be too dangerous to rely solely on a fall arrest system. Examples include:

- Working in a fixed position on a gantry or other platform at height.
- Working from a trailer or moving vehicle.

The key phrase to keep in mind is Zero Fall Risk. Restraint products are only used correctly when they guarantee there is no risk of fall whatsoever.

QSI recommends you use a full body harness and fall arrest system as a backup to your restraint system. In other words, set up your work environment with suitable fall arrest equipment, then add a restraint system to restrict movement and prevent a fall. It is your responsibility to perform a full risk assessment of your situation to ascertain whether a fall arrest system is required.

Chest restraint harness

Features

This harness includes a dorsal D-ring for restraint attachment with easy adjustment of the shoulder straps and a Quick Release Buckle.

- MBL: 15kN

NOT TO BE USED FOR FALL ARREST.

Product Codes

PVC Harnesses

Our range of PVC harnesses and other height safety equipment is designed primarily for the food and paint industries. As well as meeting the appropriate safety standards, the PVC webbing material offers some special benefits:

- Resistant to acids, blood and fat
- Easy to clean
- Industry-appropriate colour

PVC full body harness

Features

Our Full Body Harness with PVC coated webbing features two attachment webbing loops and a dorsal attachment D-Ring for fall-arrest. The sternal attachment points are particularly suitable for use with rope or cable grabs and offer a comfortable position to work from as well as for rescue.

High strength, easy adjustment webbing buckles are used on both legs and chest. Other features include easy-grip shoulder adjustment buckles, webbing fall arrest loops and high strength stitch pattern.

The SBE2PVC is AS/NZS 1891.1:2007 certified. It is available in sizes 3XL and above for use in conjunction with a 150kg rated block. See pg.<?> for more information.

Certified to: AS/NZS 1891.1:2007

Optional Extras

- D-Ring Extension Strap
- X-Factor Shoulder Padding System
- AirTech Breathable Padding System (see pg. 129)
- Heavy Duty PVC Bags, Backpacks, etc (see pg. 156)
- Tool Lanyards and Pouches (see pg. 208)

premium
industrial clothing

Why choose QSi Premium Industrial Clothing?

We have been leading and innovating garments in various industries throughout the world's markets, from electric arc, petrochemical, mining and all other large and small businesses.

It is QSi's attention to detail, and listening to our customer's needs that are helping us innovate and stay current with market trends.

Linking this ability, and having world-leading raw material manufacturers supplying tried and tested fabrics, we offer a large range of products to meet our customer's individual needs.

With in-house manufacturing capabilities and partnerships with overseas suppliers, no problem is too big or too small for us to help with.

Talk to one of our sales specialists today to see how we can help you.

Road worker 100% cotton overalls

IRON WEAR

Features

QSi's IronWear range of 100% cotton overalls are built tough without sacrificing comfort. The Road Worker is designed for workers in high visibility situations, while also suitable for most other rugged work environments.

- Standards Compliant orange and blue colour scheme
- TTMC-W transit compliant reflective tape front and back
- Adjustable velcro wrist straps
- 280gsm 100% cotton
- Double-layer knees and seat
- Large, rugged front zip, easy to use while wearing gloves
- Breast pockets with velcro flaps
- Hip pockets
- Pen pocket
- Ruler pocket
- Hip access to inner garments
- Size range: 4 - 15
- Screen printing and monogramming of name, company logo, etc also available

Product Codes

OAIWCOTTMC_ 100% Cotton Overall 280gsm

IRON WEAR

IronWear 100% cotton overalls

Features

QSi's IronWear range of 100% cotton overalls are built tough without sacrificing comfort. IronWear overalls are designed in New Zealand for New Zealand body shapes, so you can be sure of a comfortable fit. Ideal for most rugged work environments, they're suitable for mechanics, farmers, engineers, rubbish removers, tradesmen and labourers.

- Double-washed, pre-shrunk fabric
- 280gsm 100% cotton
- Double-layer knees and seat.
- Large, rugged, double-ended front zip, easy to use while wearing gloves
- Breast pockets
- Hip pockets
- Seat pocket
- Pen pocket
- Ruler pocket
- Hip access to inner garments
- Size range: 4 - 15
- Screen printing and monogramming of name, company logo, etc also available

IronWear Hi Vis wet weather 5 in 1 TTMC-W compliant

Features

QSI's IronWear 5 in 1 Jacket, Vest, and Bib Trousers are designed in New Zealand for New Zealand body shapes, so you can be sure of a comfortable fit.

Ideal for most rugged work environments, they're suitable for mechanics, farmers, engineers, rubbish removers, tradesmen and labourers.

Bib Trouser features include:

- 100% polyester 300D oxford PU coated for the body
- 13,000mm waterproof rating
- 3,000mm breathability rating
- TTMC-W transit compliant reflective tape front and back

Size range: S, M, L, XL, 2XL, 3XL, 5XL, 7XL

Screen printing and monogramming of name, company logo, etc also available.

ICETEC freezer wear

Features

ICETEC Freezer Wear provides the ultimate protection for some of the most challenging working environments. Designed to be tough and flexible, ICETEC Freezer Wear protects you from the cold while still allowing you to move easily and work efficiently.

- AS/NZS 4602.1:2011 and AS/NZS 1906.4:2010 compliant
- Suitable for day or night use with high visibility reflective tape
- Heavy Duty 450d Oxford fabric outer shell (100% polyester) with water resistant PU coating
- 100% polyester lining with 320gsm quilted padding
- Seam sealed and waterproof
- Available in sizes S to 4XL as well as 6XL and 8XL

Electric Arc high visibility safety garments

High Visibility safety garments are manufactured to comply with AS/NZS 4602.1:2011 standards.

It is essential that the appropriate garment be worn at all times. Class D/N garments are suitable for use during the day or night. Class D garments are suitable for use only during the day when high visibility is required. Class N garments are suitable for use only during the night when retroreflective is required.

How to choose the correct flame resistant clothing

With all the options of new products being continuously brought into the market, it is important for a user to determine the level of flame resistant (FR) garment protection required, the comfort and weight to the user and the cost of the FR protection.

As long as you understand the benefits and limitations to the product you are purchasing, you will be able to make an accurate decision. There is a good reason some of the more prominent brands are slightly more costly than some unknown imported product. This is due to the fact that the fabric manufacturers have invested the time and money into the continuous improvement and quality management of their product. Look to fabrics that are market proven to ensure you are getting the best protection. As we better understand the risks presented in the everyday work environment we are better able to predict risk and prepare for any situation that may eventuate.

The first question that needs to be asked is "Who is at risk and who needs flame resistant (FR) protective garments?" The answer is pretty simple - any person who does work in a hazardous environment that may involve coming into contact with hot metal, grinding or welding sparks, electric arc, flash fire, explosions from gas or dust or general fires like rural fires.

Industries that would fall into these categories are, electricians, electric utility linesmen, refinery, chemical and pharmaceutical workers, workers in the pulp and paper industry, food processing, paint, rural fire fighters and many more industries as well as anyone who comes into contact with energized equipment like road workers and arborists working near power lines.

How do I choose what to garment to use?

With the global market becoming more accessible, the ability to import a finished garment has become a lot easier. There has been an increase in FR garment options and this has resulted in a misrepresentation of the garment's performance ability, creating a lot of confusion in the market.

The best way to determine what is best for your business is to make an informed decision based on fact. In order to do this you will need to understand the various types of products available to you and the pros and cons of each one. There are a lot of fabrics and blends as there are so many different application requirements.

Not all FR fabrics will do the same jobs

Let's take a systematic approach starting with the entry level fabric, moving up to the higher performance fabrics. The entry level, easy to obtain fabric of choice over the last few years has been a 100 percent FR treated cotton fabric. This garment is not inherently flame resistant such as QSI Spectron garments. A manufacturer will use specific combinations of chemicals and will soak or spray the material so it will have the ability to self-extinguish after being exposed to flames. The FR chemicals are "activated" by intense heat, producing char and gases that inhibit combustion. This is a treatment placed onto a finished fabric so the fire retardant materials lose their fire retardant properties after a number of washes. This is commonly known as a "50 wash garment". The drawback to this fabric is that normally, to achieve a suitable arc rating or long burn exposure, they need to be a heavier weight (260-270gsm = 8 Cal+), this makes them a little heavier and a little more uncomfortable in the hotter seasons. This is generally a 1 year use garment.

Locking in FR treatment

In the last few years some more advanced ways of locking the FR treatment into the core of the cotton fiber have come about. This has brought about some great technical fabrics that have 88 percent cotton with 12% nylon such as QSI Banwear. Unlike the basic treated cotton fabric the FR treatment gets released from the core of the fiber, taking longer to leach out.

In most occasions the life of the garment is depleted before the FR treatment is gone. This is still a fire-retardant fabric. The 12 percent nylon adds extra durability and makes this garment a more durable option. It would have around a two to three year lifespan. It also requires a heavier weight to get the better arc rating or longer burn performance (260-270gsm = 9 Cal+).

Genuine FR material

With the advancement of technologies, a lot of technical fibers have been developed to be genuine, inherently flame-resistant material. Some types of fibers are modacrylics, FR viscose, Kermel, Nomex and Kevlar. The fibers these materials are made from are inherently non-flammable. Inherently flame-resistant materials are not affected by proper laundering.

The challenge is that some of these fibers shrink when they come into contact with heat, others may be uncomfortable to wear and are not a soft fabric -- some are difficult to dye and fade easily.

Affordable options

A more affordable option that is now coming out into the market is a blend of a 50-60 percent synthetic fiber with a cotton blend like Protal. The synthetic fiber acts as an oxygen scavenger so it prevents the cotton from burning. This fabric is more durable than the cotton fabric alone and does not require a treatment for the FR properties.

The only drawback is that it may not be suitable for a longer flame exposure and is more suited to an arc flash environment where you have a very short exposure to a flame.

High end fabrics

The higher end fabrics that combine durability, long burn protection and light weight performance are normally a combination of two or more technical flame resistant fabrics like QSI Kermel with FR Viscose. They are generally lighter (245gsm = 8 Cal+).

They are also known as a three-to-four year garment due to the fact they do not lose their FR properties and the Kermel fibers are also more durable.

The advantages include:

- Light weight fire resistance performance
- High durability
- Colour durability
- Proven performance in severe environments
- No performance degradation through over-washing or incorrect washing

PPE must also be worn properly

- Avoid the use of polyester, nylon, polypropylene and polyamide undergarments (sports material). Use FR, cotton, wool or rayon underwear and T-Shirts - non-melting.
- Ensure appropriate size and fit (maintain air gap between body and garment)
- Close PPE correctly (buttons, zipper, Velcro, etc) always done up
- Do not roll up sleeves.
- Keep it clean - the garment should not have flammable contaminants on it. Follow the cleaning and maintenance instructions on the inside label. Only repair or modify the garment following the guidelines provided by the garment manufacturer.
- Outermost wear must be flame resistant - e.g. do not wear a PVC raincoat over a FR coverall in a FR environment.
- Recommended stock: It is recommended that 3 sets of selected suitable FR garments are purchased per employee. This allows for 1 to be worn, while 1 is laundered and then a spare to be kept in stock.
- Consider FR head, face, hands and foot protection too.

When do I replace my garments?

Fire retardant clothing can lose its FR properties before physical damage is noticeable. Any garment, flame resistant or fire retardant, that has any visible holes or tears, should be repaired or removed from service immediately. Get the manufacturer's guidelines on the longevity of the specific FR treatment you are using.

Choose the fabric that works for you

Kermel® clothing gives you total confidence and is the ultimate choice for protection from arc flash.

The risk of arc flash is a fact of life when working in high-voltage situations. We all hope it will never happen, but when it does you want to be wearing the best protection available.

Industry-leading Kermel® aramid fibre fabric is inherently non-flammable, with a high resistance to abrasion and chemicals, and FR protection is guaranteed for the life of the garment*. It is also more lightweight than many other competitive fabrics, with moisture-wicking properties that make it very comfortable to wear. Kermel® is your premium choice for long-lasting, hard-wearing protective clothing.

Specifications:

- Meets the requirements of AS/NZS 4602.1:2011
- ATPV ≤ 9.5Cal/cm²
- Garment Fabric: 50% Kermel® Aramid, 50% FR Viscose.
- Sewing Thread: Aramid flame retardant thread.
- Reflective Trim: Flame retardant AS/NZS 1906.4:1997 certified.
- Size Range: Shirt, Jacket, Trousers: S - 3XL
Overalls: 4 - 15

- Twin front and rear pockets.
- Single cargo pocket.
- Hip radio pocket.

Protal® remains comfortable and cool with new breathable technology previously impossible in FR protective clothing.

When a flame comes into contact with Protal®'s unique intimate blends, tiny amounts of inert, non-burning gasses push the oxygen away from the surface to stop the burning process. As soon as the flaming stops and the source is removed, gas production stops and a charred barrier remains – no melting, no dripping and no material sticking to the skin.

The charring action and protected integrity of the fabric gives the wearer valuable time to react appropriately, while being fully protected.

Specifications:

- Meets the requirements of AS/NZS 4602.1:2011

Banwear® gives you the best of both worlds: top-quality, long-lasting arc flash protection at an affordable price.

Banwear® harnesses the durability of nylon for long life and the heat resistant properties of cotton for improved protection. The blend of 88% cotton and 12% nylon eliminates the need to wear T-shirts to achieve industry standard protection.

Banwear® is the original extended wear life fabric. It offers a new level of comfort, safety and durability, delivering the best protection and lowest cost-per-wearing in the industry. Better still, FR protection is guaranteed for the life of the garment*.

Need full arc flash protection at an unbelievably low price? Look no further than Spectron™ 100% FR Cotton.

Spectron™ is the perfect solution for affordable arc flash protection. It offers the familiar, breathable comfort of 100% cotton with a special treatment to provide full protection from arc flash, sparks and electrical fires.

The flash resistant properties of Spectron™ are guaranteed for up to 50 wash cycles*, making it a cost-effective choice for short-term contractors who may only need protection during a limited time frame.

Specifications:

- Meets the requirements of AS/NZS 4602.1:2011

Comfort, protection, flexibility, durability, visibility. ArcDry™ ticks all the boxes.

ArcDry™ clothing gives you the perfect combination of FR protection and total comfort. Made from 100% cotton with TransDry™, ArcDry™ wicks away moisture in even the harshest conditions while active antimicrobial properties prevent the build-up of odorous micro-organisms.

Specifications:

- Meets the requirements of AS/NZS 4602.1:2011 and NFPA 70 E HRC 2.
- ATPV ≤ 10.6Cal/cm2
- Garment Fabric: 100% FR Cotton.
- Sewing Thread: Aramid flame retardant thread.
- Reflective Trim: Flame retardant, AS/NZS 1906.4:1997 certified.
- Size Range: S - 6XL

Why two full reflective options?

When the original TTMC-W standard was written, the polo shirt design had specific requirements around the length of the garment in the front and back. Unfortunately this didn't take arc-flash into consideration.

In order to meet the TTMC-W standard, we were forced to reduce the length of the front of the garment by 60mm. We believe this potentially leaves the wearer's lower stomach vulnerable to arc-flash.

On this basis, we recommend customers purchase our standard reflective tape polo shirt as it provides the same 4602.1 compliant reflective tape pattern as the TTMC-W model, but with extra length in the front of the garment for better arc-flash protection.

Product Codes

OAFRPOLO_	ArcDry™ Polo Shirt - Orange.
OAFRPOLOTR_	ArcDry™ Reflective Polo Shirt - Orange with reflective tape.
OAFRPOLOTRFL_	ArcDry™ Reflective Polo Shirt (TTMC-W) - Orange with reflective tape.

TTMC-W non-compliant design but improved arc-flash protection.

TTMC-W compliant design.

ArcStorm™ wet weather clothing brings together the best in water resistance and FR protection in the one garment.

ArcStorm™ clothing is the perfect choice for those needing flame retardant protection while working in extreme environments where rain or snow may be a factor.

The sturdy 300D Oxford flame resistant polyester outer shell resists tearing and abrasion damage and an antistatic PU coating provides protection from the elements while reducing the risk of arc flash. All garments in the range are seam sealed for added water protection.

ArcStorm™ garments are fully lined with FR cotton (or FR polyester fleece) providing excellent arc flash protection.

Product Codes

WWFRJACK_	ArcStorm™ Jacket (TTMC-W) - Orange and blue with reflective tape.
WWFRBIBTR_	ArcStorm™ Bib-Trouser - Orange and blue with reflective tape.
WWFRVEST_	ArcStorm™ Vest (TTMC-W) - Orange with reflective tape.

ArcStorm™ bib trouser

- Adjustable elastic shoulder straps.
- Full reflective FR tape.
- Front bib pocket with hook & loop flap.
- Ankle zips for easy donning.

Specifications:

- Meets the requirements of AS/NZS 4602.1:2011
- Tested to EN533-1, EN1149, AS/NZS 1906.4:1997 standards.
- Fluoro orange conforms to AS/NZS 1906.4 2010
- Reflective Trim: Flame retardant AS/NZS 1906.4:1997 certified.
- Size Range: S - 8XL
- Outer Shell: 300D Oxford Flame Resistant & Antistatic PU.
- Inner Linings: Flame Resistant cotton and flame resistant polyester polar fleece.
- Sewing Thread: Aramid flame retardant thread.

ArcStorm™ vest

- Twin hip and front pockets.
- Snug fitting high collar helps keep the rain out.
- Zips into the ArcStorm™ Jacket for extra protection.
- Full reflective FR tape, TTMC-W.
- Robust front zip and hook & loop flap.
- Warm polar fleece lining.

ArcStorm™ jacket

- Seamless shoulders.
- Removable polar fleece lining.
- Snug-fit hood with chin flap, folds away under collar when not in use.
- Dual-runner, non-locking zip.
- Twin waist pockets with hook & loop fastening flaps.
- Elasticated internal cuffs and adjustable outer cuffs.
- Full reflective FR tape, TTMC-W.

Flexible under-arm system prevents garment riding up when arms are raised.

Elasticated internal cuffs prevent water entering sleeve.

Snug fitting hood with chin flap and wide opening helps maintain peripheral vision.

Robust, dual runner, non-locking plastic zips with hook & loop protective flaps.

5-in-1 System - a jacket for all seasons.

The ArcStorm™ Jacket has a removable polar fleece lining allowing comfortable use in all seasons. The ArcStorm™ Vest also zips into the jacket in place of the original lining, providing an additional layer of warmth and protection.

On the front line of high-voltage electrical work, Banwear® Switching Garments help you get the job done safely.

Banwear® Switching Garments use multiple layers of 7oz arc flash resistant Banwear fabric to boost protection while maintaining comfort. Garments are available in both 2-layer and 3-layer options to suit a variety of situations.

We alternate the fabric colour in each layer so you can tell at a glance how many layers a garment has, and if the outer layer is damaged.

All jackets have hook & loop front closures, with the option of added zips on our long jackets.

We're not just thinking about electrical safety: our switching jackets use a Hi Vis orange for the outer fabric to ensure you can be seen on the job, with the option of reflective tape to aid night visibility.

Other options are available including detachable hoods and Chinese collars, so you can get the garment that works best for you.

Jackets come in a drawstring bag as standard, but you can upgrade to a robust backpack if you desire.

(See overleaf for more garments.)

Fabric Specifications:

- Meets the requirements of AS/NZS 4602.1:2011 where indicated.
- Meets the requirements of ASTM 1506, OSHA Regulation 29 CFR 1910-269, NFPA 2112 and NFPA 70E.
- Garment Fabric: 88% Cotton, 12% Nylon.
- Sewing Thread: Aramid flame retardant thread.
- Reflective Trim: Flame retardant, AS/NZS 1906.4:1997 certified.
- Size Range: S - 3XL

Industrial Coveralls

Industrial Coveralls

QSI brings you the ultimate in disposable safety clothing: Q-TECH industrial coveralls. Whether you're working with chemicals, asbestos, oil or paint, or simply in a dusty environment full of particulates, there's a Q-TECH coverall to suit your needs.

Q-TECH coveralls are fully certified to the relevant EN standards, giving you the peace-of-mind that the garments will perform, and are made from proven quality non-woven fabric that sets the benchmark for disposable safety clothing.

Thanks to QSI's scale and lean structure, we can deliver these high-end garments at some of the most competitive prices in the marketplace, giving you the protection you need at a price you can afford.

Sizing Chart

Size	Chest (CM)	Height (CM)
S	84-92	162-170
M	92-100	170-176
L	100-108	176-182
XL	108-116	182-188
XXL	116-124	188-194
XXXL	124-132	194-200

Sizes are according to EN340 standard.

IMPORTANT NOTE

- Garment sizes and specifications are subject to change without notice.
- QSI makes no guarantee of results and it is the user's responsibility to determine the level of hazard risk and the proper personal protective equipment needed.

Features

3-piece hood gives the optimal balance of a secure fit and ease of movement.

Tight sealing zip fastens right to the edge of the garment to better fit the contours of your face.

Wide storm flap protects the zip and helps prevent dust and liquid from penetrating.

Reinforced gusset offers the right combination of strength and flexibility for ease of movement.

Elasticated waist band helps garment to comfortably fit a wide range of body shapes.

Elasticated wrist and ankle openings form a snug fit to prevent contaminants from penetrating.

Medical Emergency Buyers Guide

The past few decades have seen a significant rise in the instance of drug-resistant illnesses, from the SARS threat of 2003, to the H5N1 (Avian Flu) virus of 2004-2007, to the most recent outbreak of Ebola haemorrhagic fever in West Africa.

The Q-TECH 2000 is the most suitable coverall in our range to help protect health workers and medical staff from the risks of such viral infections and other biological hazards.

The Q-TECH 2000 conforms to coverall standard Type 5 & Type 6. It provides protection from light spray and splashes of liquid chemicals, as well as hazardous dusts and dry particles. Moreover, the Q-TECH 2000 meets the EN14126 Standard (protection against biological hazards and infective agents) with particularly good performance in ISO16603:2004 (synthetic blood penetration resistance) and ISO22610:2006 (wet bacteria penetration resistance).

The quality of this product has been recognised around the world by various Ministries of Health and Centres for Disease Control (CDC) who have chosen the Q-Tech 2000 as a qualified 2-series protective disposable overall.

Q-TECH 2000 achieves the highest level of class 6 protection and is recommended for front-line medical personnel.

West Africa Ebola Outbreak

The Ebola outbreak has officially been declared a global health emergency by the World Health Organisation (WHO).

WHO strongly advises ebola health-care workers should receive appropriate training, equipment (gloves and personal protective equipment [PPE]) for treatment, plus instructions on proper removal and disposal of PPE.

As the route of infection is through contact with bodily fluids and not droplet spread, health workers require protective coveralls for Ebola, much more than for SARS.

So how do you choose the appropriate protective coveralls? Here are 3 aspects to consider:

Fabric - Does the fabric offer the protection you need?

Ebola virus typically measures 920nm in length and 80nm in diameter. The micropores of the Q-TECH 2000 are approximately 80~120nm in diameter and overlap each other, which allows air to pass through while keeping pathogens out.

CE Standard - Does the garment meet the required standards?

EN 14126 is a reference standard. Q-TECH 2000 meets EN14126 (protection against biological hazards and infective agents) with the highest level of performance in 4 out of 5 tests (ISO16603:2004 and ISO22610:2006, ISO22611:2003, and ISO22612:2005) as the chart below shows.

Comfort - Will the garment be comfortable enough for your working environment?

The ideal disposable coverall offers enough protection to keep Ebola out but is porous enough to allow a certain amount of air flow. The unique fabric of the Q-TECH 2000 gives the protection you need plus the breathable comfort required when working long hours in hot climates.

Fabric Resistance to Penetration of Infective Agents	Test Method EN14126:2003	EN 1149-1	EN 14126	EN 1073-2	TYPE 5-B	TYPE 6-B
Synthetic Blood Penetration Resistance	ISO 16603	Class 6	✓			
Blood-Borne Pathogen Penetration Resistance	ISO 16604	Class 1				
Contaminated Liquid Aerosols Penetration Resistance	ISO 22611	Class 3	✓			
Contaminated Solid Aerosols Penetration Resistance	ISO 22612	Class 3	✓			
Wet Bacteria Penetration Resistance	ISO 22610	Class 6	✓			

Coverall Standards Explained

Industrial coveralls fall into one of three categories depending on the level of protection they provide against various hazards.

Category I Simple products. Products which are not suitable to protect against any form of hazard.

Category II Intermediate products. Products which fall into neither category I or III.

Category III Complex products. Products which are worn or held in order to protect against any hazard which may be life threatening.

TYPE 1 BS EN 943-1
Gas tight suits. Suits which are intrinsically sealed against the environment.

TYPE 2 BS EN 943-1
Non-gas tight suits. Suits which retain a positive internal pressure to prevent ingress of dusts, liquids or vapours.

TYPE 3 BS EN 14605
Liquid tight suits. Suits which can protect against strong and directional jets of a liquid chemical such as spray from a burst pipe under pressure. Requires a barrier fabric and sealed seams.

TYPE 4 BS 1N 14605
Spray tight suits. Suits which can protect against saturation of liquid chemical, where volume of the liquid builds up on the suit forming pools, resulting in rivulets. Requires a barrier fabric and sealed seams.

TYPE 5 BS EN ISO 13982-1
Dry particle suits. Suits for protection against hazardous dusts and dry particles.

TYPE 6 BS EN 13034
Reduced spray suits. Suits for protection against light spray and splashes of liquid chemicals where there is no direction spray or build up of liquid on the suit, but there may be a fine mist of droplets in the atmosphere.

Anti-static EN 1149-5
Electrostatic dissipative protective clothing with a surface resistance of maximum 2.5 x 10 exp 9 ohm.

Radioactive contamination EN 1073-2
Protective clothing against particulate radioactive contamination.

EN 14126
Protection against biological hazards and infective agents.

Limited flame spread protection EN ISO 14116
Limited flame spread materials, material assemblies and clothing.

QTech 500 coverall

Features

The Q-TECH 500 is our standard disposable coverall, designed for light protection against non-toxic liquids and dust.

- Strong, durable and comfortable
- Individually wrapped or packaged in bulk
- CE Category 1 overall

Applications:

- Civil Defence
- Construction
- Painting and Decorating
- Food Processing and Packaging
- Medical and Emergency

Product Code

QTECH500_ Q-TECH 500 Industrial Coverall

QTech 1000L coverall (types 5 and 6) & FR version

EN 1073-2

TYPE 5

TYPE 6

Features

The Q-TECH 1000L (lightweight) sets a new benchmark for Type-5 and Type-6 garments: 30% lighter*, more breathable, better protection.

- Double layer PPSB improves fabric strength, tear and puncture resistance.
- Melt blown fabric laminated between the PPSB layers provides excellent particle barrier capabilities. The fabric filters resist 99.8% of particles of size 0.5-1µm.
- Passes EN1073-2 for protection against radioactive particulate contamination.
- Passes EN1149-5 for antistatic property (by option).
- Fully elasticated hood, ankles and wrists, to maximize comfort and protection.

Applications:

- Asbestos Handling
- Automotive
- Civil Protection
- Construction
- Painting and Decorating
- Waste Management

Stitched Seam

Reinforced 4-thread overlapped seam offers stronger seam strength and better protection.

QTECH1000_ Q-TECH 1000L Industrial Coverall

QTECH1000FR Q-TECH 1000L FR Industrial Coverall

QTech 2000 coverall (types 5-B & 6-B)

EN 1149-1

EN 14126

EN 1073-2

TYPE 5-B

TYPE 6-B

Features

Q-TECH 2000 provides excellent protection from liquid chemical spray and biological hazards, while remaining breathable and comfortable.

The Q-TECH 2000 provides protection from light spray and splashes of liquid chemicals, as well as hazardous dusts and dry particles. It achieves the highest level of class 6 protection and is recommended for front-line medical personnel.

- Chemical liquid (EN368) and blood (ASTM F1670) penetration resistance for premium protection.
- Passes EN1149-5 for antistatic property.
- Passes EN1073-2 for protection against radioactive particulate contamination.
- Passes EN14126 for protection against biological hazards and infective agents (TYPE 5-B, 6-B)
- Low linting to reduce the risk of environment contamination.

Applications:

- Asbestos Handling
- Agriculture and Farming
- Automotive
- Biological Hazards
- Chemical Handling
- Clean Room
- Electronics
- Engineering
- Hazardous Materials
- Military
- Spray Painting
- Printing

Product Code

QTECH2000_ Q-TECH 2000 Industrial Coverall

QTech 3000T coverall (types 4-B & 5-B & 6-B)

EN 1149-1

EN 14126

EN 1073-2

TYPE 5-B

TYPE 6-B

Features

the Q-TECH 3000T uses the same breathable barrier protection fabric as the 2000 but the taped seams provide an extra level of protection from saturation of liquid chemicals, especially important in situations where liquids may pool on the garment.

- Chemical liquid (EN368) and blood (ASTM F1670) penetration resistance for premium protection.
- Passes EN1149-5 for antistatic property.
- Passes EN1073-2 for protection against radioactive particulate contamination.
- Passes EN14126 for protection against biological hazards and infective agents (TYPE 4B, 5-B, 6-B)
- Low linting to reduce the risk of environment contamination.

Applications:

- Asbestos Handling
- Automotive
- Biological Hazards
- Chemical Handling
- Clean Room
- Decontamination
- Disaster Management
- Hazardous Material
- Industrial Cleanup
- Medical/Emergency
- Military
- Oil Handling/Tank Cleaning
- Spray Painting
- Printing
- Powder Coating
- Pharmaceutical

Stitched with Tape Seam
Stitched with chemical barrier tape seam for a higher barrier to particulate and liquid splashes.

General Safety Equipment

History of QSi and their knowledge of safety equip...

QSi has been designing and manufacturing safety products in New Zealand for over 18 years. Boasting onsite manufacturing facilities for industrial clothing, height safety, signage, respiratory and plastic injection moulding, we are innovating and providing more solutions to the market locally and internationally.

With our extensive range of health and safety brands, we cover most market needs from medical products, to custom branding and embroidery. Speak to one of our trusted resellers to get a solution you can trust.

QSi is proudly New Zealand owned and operated.

Safety Eyewear

Our range of safety glasses feature:

- Manufactured to AS/NZS 1337.1:2010 standard
- Anti-scratch hard coating
- Frameless wrap around style for superior comfort, a snug fit and less risk of particles or fluid getting in behind glasses
- Anti-fog lenses filter 99% of harmful UV rays

Nikki 3 Hard Hat

Features

- Anti-glare peak
- Quick-fit suspension
- Modern, stylish, and unique design
- 4 or 6 point chin strap attachment points
- UV inhibitor protects and extends life of helmet
- Contoured rain channel offers maximum rigidity
- Lightweight and comfortable fit, easy to wear all day
- One handed ratchet adjustable shock-absorbing suspension
- Lightweight ABS plastic offers excellent rigidity and protection (forestry poly version available)
- 4 or 6 point lightweight lining with soft absorbent crown and sweatband
- Slotted integration of wide range of accessories (earmuffs, faceshields, visors)
- Advanced permaweat breathable sweatband (easily replaceable and washable)
- Pad printing available for up to 4 colours
- Portion of your purchase goes towards Brain Injury Support

Manufactured to: **AS/NZS 1801:1997**
 NZ Des App. No. **424810**

FFP2 moulded respirator

Features

This moulded mask features a metal noseclip and closed-cell foam nosepiece for superior seal, plus non-memory elastic to suit all head sizes.

Meets the following standards:

- EN149:2001
- AS/NZS 1716:2003
- CE 0086

20 units per box. 12 boxes per case.

Product Codes

HI8620 FFP2 moulded respirator - box 20

FFP2V moulded respirator with valve

Features

This mask is fitted with a valve to reduce breathing resistance. Also features a metal noseclip and close-cell foam nosepiece for superior seal, plus non-memory elastic to suit all head sizes.

Meets the following standards:

- EN149:2001
- AS/NZS 1716:2003
- CE 0086

10 units per box. 12 boxes per case.

Product Codes

HI8622 FFP2 moulded active carbon respirator with valve

FFP2CV moulded active carbon respirator with valve

Features

This mask features an active organic carbon layer to help remove odours from low-level organic vapour.

Also features a metal noseclip and close-cell foam nosepiece for superior seal, plus non-memory elastic to suit all head sizes.

Meets the following standards:

- EN149:2001
- AS/NZS 1716:2003
- CE 0086

10 units per box. 12 boxes per case.

Product Codes

HI8626 3 ply SPM with earloops

FFP2CV moulded active carbon respirator with valve diagram

Closed cell foam nosepiece is fully integrated into mask edge, providing superior seal in nasal area and helping prevent fogging of eyewear.

Lightweight alloy nose bridge works with foam nosepiece to increase seal of mask.

Reinforced flanges provide strong attachment points for strap without compromising the mask media.

Exhalation valve improves comfort by reducing heat and moisture build-up inside mask. (P2V and P2CV only).

Carbon layer absorbs harmful and irritating odours such as paint, oil, refuse and animal smells.

High quality elastic straps ensure even tension for the life of the mask, regardless of head size. Straps are welded into place, no need for staples.

Electrostatic media ensures efficient filtration of microscopic particles.

FFP2 duckbill respirator - ASTM level 3

Features

Duckbill style for universal fit.
 FFP2 Particulate respirator
 Industrial quality disposable respirator mask
 Meets the following standards:

Signage

Sign Printers

Whether it's digitally printed on vinyl or a traditionally screen printed PVC board, our signs are made right here in New Zealand.

Everyone knows the Kiwi environment is unique, with high levels of UV and varied, sometimes extreme weather. Many importers' products, mass produced in overseas factories, are just not able to withstand these conditions. We make our signs with materials chosen to suit these demands. Also, our standard sizes are a little larger than the international paper sizes of A4 and A3, so they're sure to be legible at the required distances.

Our signs come in a range of materials to offer a choice that suits the sign's location, environment and budget, the benefits of each of these materials is explained over the page. And because we make our own, if the 'off the shelf' options don't suit, we have the capabilities to supply custom signs in a variety of materials and sizes, including one-off signs with dry-erase whiteboard-style laminates, perfect for site checklists or emergency evacuation boards.

How to order your QSi signs

We've made it simple for you to find and order the signs that you need. Just go to the design range pages (use the contents table or the page-corner icons to quickly find the right range) and pick one of the size & material options shown for that sign!

Our standard sizes are chosen to suit the majority of safety sign situations. They are a little over A3 and A4 paper sizes, making them a bit bigger than many competitors' standard sizes. As a result, the designs differ slightly between sizes, as in the following examples:

Our design team ensure that these differences make the signs eye catching, clear and legible at all sizes, because a sign that can't be seen and read is no use at all.

Our signs, made to fit your requirements

We produce signs in a variety of materials, so that you can select the option that provides the best solution:

- 1 Screenprinted PVC board**
Weatherproof and durable, cost effective basic sign. 1.2mm PVC board (Drilled and radiused at four corners) out-performs many cheaper imported alternatives using thinner boards. Screenprinted with inks made for NZ environments. Ideal for 'high volume' signs, bespoke screenprinting available for quantities over 100 per design.
- 2 Screenprinted Sign Blank c/w Vinyl Text / Details on PVC board**
Combines the benefits of the above option with the flexibility of using 'low volume' or bespoke text content with standard sign layouts, ideal for one-offs and small quantities. Long lasting, purpose-made vinyl offers good performance.
- 3 Full Vinyl Decal on PVC (With Screw Holes)**
Using purpose-made materials to be weatherproof and durable, printed vinyl offers full colour/high detail capabilities. Supplied on 1.2mm PVC board drilled and radiused at four corners.
- 4 Full Vinyl Decal on PVC (No Screw Holes)**
As option 3 but with square corners and no drilled holes. Perfect for temporary/mobile signs or for using adhesives to fix them in position.
- 5 Full Vinyl Decal on PVC (No Screw Holes c/w double sided tape)**
As option 4 but supplied with double sided tape. Perfect for indoor applications such as identifying firefighting equipment or showing evacuation procedures, etc.
- 6 Full Vinyl Decal on Aluminium board**
Ideal for outdoor use or where conditions need a robust board. Produced using purpose-made materials to be weatherproof and durable. Drilled and radiused at the corners.
- 7 Full Vinyl Decal on Coreflute**
Light weight, low cost option. Ideal for situations not requiring ultimate performance or durability, such as temporary or indoor signage, where budget is the major consideration.
- 8 Self Adhesive Vinyl Sticker**
Printed on purpose-made materials to be weatherproof and durable and offering full colour/high detail capabilities. Custom sizes easily accommodated. Supplied on backing paper for your own application.
- 9 Full Vinyl Decal on Magnetic Backing**
For temporary magnetic fixing. Printed on purpose-made vinyl to be weatherproof and durable and offering full colour/high detail capabilities. Custom sizes easily accommodated.

What do the codes mean?

The codes show which size & material combinations the design is available in:

A1 — Material code
Size code

A1 — Codes shown in red indicate the stock combination for the design (other shown options may not be available from stock).

Size code

A 120mm x 120mm	1 Screenprinted on PVC board
B 180mm x 180mm	2 Screenprinted Blank c/w Vinyl Text & Details on PVC Board
C 240mm x 240mm	3 Full Vinyl Decal on PVC Board (With Drilled Screw holes)
D 250mm x 250mm	4 Full Vinyl Decal on PVC Board (No Drilled Screw Holes)
E 340mm x 120mm	5 Full Vinyl Decal on PVC Board (No Holes, with Double Sided Tape)
F 340mm x 240mm (or 240 x 340)	6 Full Vinyl Decal on Aluminium Board
G 450mm x 180mm	7 Full Vinyl Decal on Coreflute
H 450mm x 300mm (or 300 x 450)	8 Self Adhesive Vinyl Sticker
I 200mm x 400mm	9 Full Vinyl Decal on Magnetic Backing
J 600mm x 450mm	

Of course, not every combination is available for every design, so each illustration is accompanied by a series of codes to show you exactly what we produce as 'standard' for the sign. And if these don't match your requirements, we can usually produce what you need, just order it as a custom option instead! Have a look at the example for a better look at how it works, and remember that these codes are shown at the bottom of every 2-page spread, so you don't even need to remember them all!

Product Codes

QSI 3419

Size & Material Codes

E1, E3, E4, E5, E6, E7, E8
G3, G4, G5, G6, G7, G8

You don't need to remember all this, we've put the details at the bottom of all the pages for easy reference!

SIZE CODES

A 120mm x 120mm	D 250mm x 250mm	G 450mm x 180mm	J 600mm x 450mm
B 180mm x 180mm	E 340mm x 120mm	H 450mm x 300mm (or 300 x 450)	
C 240mm x 240mm	F 340mm x 240mm (or 240 x 340)	I 200mm x 400mm	

Fully equipped for responsive service

Modern technology means that signs can be produced more consistently, efficiently and with higher quality than ever before. QSi have invested in New Zealand manufacturing to provide a range of signs to meet the requirements and keep up with our evolving workplace legislation.

A dedicated production team provides a fast turnaround on non-standard signs and can provide proofs for custom designs that ensure you get the result you're after.

Modern workplace environments are constantly changing, and our signage department has the skills, resources and commitment to provide a unique combination of price and flexibility to New Zealand's commercial heartlands.

MATERIAL CODES

1 Screenprinted on PVC	4 Vinyl on PVC (No Screw Holes)	7 Vinyl on Coreflute
2 Screenprinted Blank c/w Vinyl Text on PVC	5 Vinyl on PVC (No Holes, c/w Dbl Sd Tape)	8 S/A Vinyl Sticker
3 Vinyl on PVC (With Screw holes)	6 Vinyl on Aluminium board	9 Vinyl on Magnetic

Pre-printed blanks to make specials easy

Every NZ workplace is unique, with different hazards and considerations, but they all need recognisable, standardised signage. So, for those occasions where the specifics of a site require a standard sign layout with non-standard content, our pre-screenprinted blanks make it quick and easy to get exactly the sign you need - it's almost like having every combination available off the shelf!

You will see that many of our sign ranges include this option, just look for the 'STOCK BLANKS' symbol.

Some ranges, such as the typical 'DANGER' sign shown above include designs that feature extra graphical elements (no smoking or no entry symbols, etc.) and these, or even unique symbols, can be incorporated into the signs built using the stock blanks, producing effective, clear signage for every client's requirement, such as:

- Do Not Feed The Animals
- No Vehicles
- BEWARE livestock roaming
- No Video Recording
- PLEASE No Littering

Off the shelf, customise or start from scratch

But what if the specific requirements don't work with the stock blanks? Well, no problem, we have a variety of 'template' designs for signs that need to be to a certain style, but vary dependent on the situation. From generic HAZCHEM boards that you can add the hazmat symbols as required to adaptable 'whiteboard' style templates perfect for site hazard lists, this new range is aimed at providing you with an easy and flexible solution to some of the more unusual sign requirements.

Our sales and design team will help you through the process, making sure you get the best signs for your needs in the shortest possible time.

Signage display stand

Features

- Display stand for our top selling signs
- Heavy duty wooden construction
- Quick reference chart to locate your desired sign
- Custom branding available
- Dimensions: 84cm wide x 62cm deep x 202cm tall

Branding

Our printing capabilities go way beyond just making signs. We also add custom branding to just about whatever you need.

Standard armbands available in a range of colours, with your choice of heatset text:

- Hi Vis Orange / black text
- Green / white text
- Yellow / black text
- Red / white text
- Blue / white text

When ordering, simply state the armband colour and the text required, we'll do the rest. Other options, e.g. reflective silver text, are available if required.

Branding can also be applied to other items - wet weather clothing, hard hats, first aid kits, polo shirts, tee shirts, height safety harnesses, magnetic vehicle signage, adhesive labels and more besides. Whatever you need branding, we can probably help!

What is best for your branding needs?

Tried and trusted, heatsetting is a widely used method for applying branding and text to a variety of materials, particularly fabrics. Although the technique has been around for decades, the latest advances offer some real benefits when compared to the old standard products.

We offer a choice of heatset materials, including the latest sublimation printing technology to cover all circumstances and bring you solutions that fit your requirements.

COLOURED HEATSET VINYL:

Solid, single-colour heatset vinyl.

Pros: Because the material is a solid colour, it is fully opaque and lasts extremely well. Colour cannot be removed from the vinyl surface by abrasion or chemicals.

Cons: Limited ability to handle high detail, can take lots of time to weed out complex designs.

PRINTABLE WHITE HEATSET:

Digitally printed white heatset vinyl.

Pros: Well suited to designs featuring gradients and high detail artwork.

Cons: Can take lots of time to weed out complex designs, often needs to incorporate a white outline/border. Some printed colours may be affected by Hi Vis clothing.

PRINTABLE CLEAR HEATSET:

Digitally printed clear heatset vinyl.

Pros: Well suited to designs featuring gradients and high detail artwork.

Cons: Generally needs to incorporate a clear outline/border. Reduced opacity, particularly on Hi Vis - blacks are OK but colours are often affected by garment colour.

SUBLIMATION PRINTED HEATSET:

Digitally printed ink-based transfer.

Pros: Handles high detail designs well, gives a 'dyed-in' finish rather than a surface-applied look. No weeding time.

Cons: Only suitable for polyester or high synthetic content fabrics, generally limited to black-only designs. High heatset temperature.

Speak to our sales team about your garment branding requirements, to get the right products for you every time.
